BASIC SCHEMATIC CIRCUITS

Switch circuitry can be described as combinations of basic schematic circuits as shown below. N.O. means normally open; N.C. means normally closed.

side prevents accidental actuator by-pass of switching positions. Switch has rigid "U"-shaped, twin girder frame. Its parallel steel members terminate in an interlocked box where spring combinations are mounted. The special long life, nickel-silver springs can be individually fastened to any one of the frame's four switch stacks mounting positions. Welded cross bar palladium contacts rated at 3 amps, 250 volts AC, 1000 cycles. Includes 4000 counts and 41000 counts on 1" centers in a $\frac{1}{8}$ " dia. hole in panels up to $\frac{1}{4}$ " thick. Requires only $2\frac{1}{2}$ " depth behind panel. The bushing includes a keyway to accept the non-turning ring which prevents switch turning or twisting in panel. Add suffix "L" to Part No. to indicate locking type.

PATCH CORDS, JACK PANELS AND TELEPHONE PLUGS: Audio, Broadcast, Miniature

patch cords feature telephone type plugs on cords to withstand hard use. Two or more conductors of these are covered with numerous layers of insulating waterproofing. The cords are color coded, shielded and then covered with a final braid of nylon to long service. The nylon is standard black unless a specific. Available at a slight extra charge are: L, Brown (BR), Green (GR), Red (RD), Slate Gray (GY) (WH). PP indicates the cord has a plug at both ends.

"840" PATCH CORDS

Standard type "506" twin plugs at both ends. Conductors are shielded to tip and the shield (when used) is connected to ground. Commonly supplied with shield at one end only. Available without shield (W in number), or with shield attached at both ends (X in number). PP indicates the cord has a plug at both ends.

TUBE SOCKET TEST ADAPTERS

T-789

T9N

TUBE SOCKET TEST ADAPTERS are ideal for making voltage resistance and wave form measurements from the tube side of electronic equipment. To use, insert adapter between tube and socket, and replace tube in adapter socket. Special test tabs are recessed on the adapter skirt and have a hole to grip test probe and protect operator's fingers during insertion and withdrawal. Regular alligator test-clipped probes also hold on tab and socket. Castings are low loss phenolic and fit all shield bases for miniature and noval type or into standard tube clamps. Reduced body diameter permits insertion into new telescoping shields. Adapter socket contacts are beryllium copper, silver plated for long life and low resistance. Electrostatic capacity between adjacent leads of the adapter is approximately 1 micro-micro-farad. Flash over voltage between adjacent terminals is in excess of 1500 volts DC.

Kit T789 consists of the three popular "must have" sizes, 7-pin miniature 8-pin octal, 9-pin noval and a P1 probe in a handy clear plastic carrying case.

CURRENT TEST ADAPTERS

Versatile VECTOR CURRENT TEST ADAPTERS make possible tube circuit current or voltage measurements without cutting leads or making computations. All measurements may be made from the tube side of the electronic equipment without disturbing the chassis.

EXTENDED TUBE SOCKET TEST ADAPTERS

For most work the short, unshielded adapters are adequate. For hard to reach locations or where surrounding equipment restricts use of regular test adapters, the 3 to 4 inch extended adapter may be used. In these the leads between plug and socket are individually shielded to minimize coupling. The shield is brought out to a lug on the wall of the adapter and should be connected to the chassis being tested. Capacity to shield is approx. 8 mmf. per lead.

SOCKET EXTENDERS EXPERIMENTER'S TEST ADAPTERS

Socket extenders provide a replaceable unit for use in tube testers and expensive meters. Wear is shifted from the socket in the tester to the one in the extender so that when it is worn out a new one can be easily inserted. Sockets have beryllium copper silver plated contacts for long life. An all molded outside shell is used with socket leads soldered to plug pins. All units provided with 1 3/4" long screw to hold unit firmly in place if desired.

EXPERIMENTER'S TEST ADAPTERS. These are similar to the Socket Test Adapter but are less the shells and tabs so that connections can be cross-connected in any desired way. User must solder connections.

VEROBOARD VEROBOARD KITS UNIVERSAL WIRING BOARDS

BUILD ANY CIRCUIT IN 2 EASY STEPS NO ETCHING—NO WIRES—NO TERMINALS

STEP NO. 1

Lay out components on the back (plain) side of the Veroboard across the copper strips inserting leads into appropriate holes. You have now connected your components as required using the copper strips as your interconnectors. Leads may be soldered directly to the strips using a light, printed circuit type iron. Careful soldering will enable you to remove components and replace them if required.

STEP NO. 2

Break the circuit where required by breaking the copper strips with the Vero spot-face cutter provided in your kit. The cutter is a precision hardened steel tool which has a pin that fits into any hole, and cutting edges. Simply turn the cutter several times and the copper strip in the area of the chosen hole will be removed. Your circuit is now complete.

WITH THESE VEROBOARD KITS

Model BK-6 contains 6 assorted Veroboard universal wiring boards, the Vero spot face cutter and instruction sheet. **Price \$35**

Model BK-7 contains 8 assorted Veroboards up to 18" long, plain Veroboard with staggered grid, spot face cutter, terminal pin insertion tool, 500 terminal pins, reproducible design sheet and instructions. **Price \$295**

APPROVED FIRE ALARM SYSTEM

National Fire Codes Pamphlet 72A details the 'Local Automatic Fire Protective Signalling System' and its installation, acceptable to the Board of Fire Underwriters, and to Federal, State and Municipal authorities. This Standard is applicable to all industrial, commercial and military installations. Best practice throughout the country uses it in homes as well. Consult your Fire Chief.

Equipment bearing the UL Label has passed rigid inspection requirements and is of high professional quality.

Proper and correct tally of Automatic Fire Detectors is basic. The Code requires detectors in each room, hall, closet, stairwell, storage area, furnace room, basement, attic, loft, shaft, chute, etc. Do not exceed the space ratings given for each type of detector.

All wiring should be done in conduit as the best insurance for longevity and trouble-free service.

Sonalert®

electronic audible signal

Sonalert is a startling innovation in the audible signal-warning field. It produces a penetrating sound by purely electronic means. Circuitry is all "solid-state" for maximum efficiency, lowest current requirements, and highest reliability. Because circuitry is solid-state, there is no arcing, no RF noise, and no mechanical wear.

Sonalert is very compact, very light, and highly versatile. Consuming less current than a normal indicator light, the device can be utilized to complement visual signals. Thus, positive audible warnings are instantly given in fault alarms for computers, fire signals, instruments, medical electronics, appliances, communications as well as telephone signals and protection equipment.

HARREL

PRECISION SOLID STATE TEMPERATURE CONTROLLERS

GENERAL

Harrel temperature controllers are intended for the precision temperature control of ovens, test fixtures, and all kinds of industrial machinery. They are arranged for easy mounting on any panel and are designed to require minimum panel space.

Temperature sensing is by means of a wire-type resistance sensor. This gives long-term stability and sensitivity which cannot be equalled by any other method of temperature sensing. The temperature sensor may be located as much as several hundred feet from the controller if desired. No special lead wires or shielding are required between controller and sensor.

ON-OFF RELAY CONTROLLERS

Utilize a rugged, solid state amplifier controlling a 10-ampere relay. Relay is easily replaceable in the field.

TIME PROPORTIONING RELAY TYPES

Similar to regular on-off controller, but controller operates on a regular cycle of on to off and back again, and it is the proportion of on-to-off time which is varied to control the temperature. Gives a characteristic which approximates true proportional control and in general gives greatly improved performance over regular on-off controllers.

TRUE PROPORTIONAL TYPES

Completely solid state. No relays, contacts, moving parts whatsoever in the power control circuits. Output does not cycle on and off but remains steady at exactly the amount necessary to hold the temperature at exactly the desired value. True stepless control gives closest temperature control of any type of controller. Elimination of contacts and moving parts means life measured in years.

STANDARD MODELS 115 volt, 60 cycle operation

Form			Temperature Range	Switching or Proportional Band*	Power Output	Price	
Non-indicating	Indicating	Type				Non-indicating	Indicating
TC-115Q	TC-115S	on-off	100-300°F	1°C	0 amps	75.00	92.00

TC-116M	—	Time Proportioning, Relay	100-500°F	1.5°C	10 amps	80.00	—

TC-396E	TC-496E	True Proportional	100-500°F	1.5°C	1000 watts**	149.00	166.00

*For on-off, temperature change at sensor to go from on to off and vice versa. For time proportioning, temperature change for 30% to 75% power output. For true proportional, temperature change from 10% to 80% full power output. Note that temperature performance for proportional types will in general be much better than figure shown; full proportional band is seldom required to compensate for changes in external conditions.

**At 25°C ambient temperature. Derate linearly to zero at 100°C ambient temperature. For indicating types, heater must be arranged so that steady state power output (that is the power other than during warm-up and cool-down) is between 5% and 75% of full power output.

Indicating Controller

INDICATING FORMS

The system of display employed on indicating forms of the controller is designed especially for automated systems. The temperature is both set and read out on the large easy-to-read dial. The indicator is separate, and is of the go/no-go type which gives a visual alarm whenever the actual temperature is not at the set point. No skill or knowledge is required of the operator. All he has to do is be sure that the indicator stays out of the two red zones. Indicating forms are mounted on an attractive escutcheon arranged for easy panel mounting or indicator may be located remotely if desired.

SENSORS

A number of different forms of sensors are available for the above

- Patch Sensor:** For measuring the temperature of surfaces. Thin and flexible; may be attached by means of an adhesive or with tape (supplied).
- Oval:** Sensors wound on oval hollow ceramic core. Bracket mount for sensing air temperature.
- Tubular:** Cylindrical sensors in aluminum or stainless steel protecting jackets. May be mounted in solids, liquids, or gases.

Lifetime lubricated gear train and motor. **Switch:** heavy duty, snap-action switch rated 15 amps, 110, 220 or 440 v. AC. **Motor:** 110 v. AC, 60 cps standard; 220 and 440 v. AC, and 25 or 50 cps available at extra cost. Speeds as noted for each type. **Case:** Heavy-gauge steel with gray hammertone finish; 5" x 6½" x 4".

MODEL 201—Gives split-second timing in compact design. "On" time adjustable 2% to 98% of total cycle time. Split cam directly driven and easily adjusted. Synchronous motor available in 100 rpm to 1/168 rph for 0.6 seconds to 1 week time cycles.

MODEL 101—Basic type with dial calibrated in degrees for accuracy. "On-off" time changed easily without tools. Patented, slip-action cam drive directly from high-torque, fully enclosed motor. Two-way clutch prevents gear damage during reset. "On-off" time adjustable to 50% of total time cycle. Motor speeds of 1, 2, 3, 4 or 5 rpm for 60, 30, 20, 15 or 10 seconds cycle time.

MODEL 101-1—Same as Model 101, but timing dial calibrated in seconds. For lab or manufacturing use. Ideal for hopper control, automatic livestock feeding, etc. Slipping clutch type cam adjusts instantly to 50% of total cycle time for "on-off."

SPST RECYCLING SEQUENCE TIMERS AND DRUM CONTROLLERS

Two basic drum controllers combine with various motor and cam combinations for recycling sequence timers to meet every need. Come with end-mount timing dials and shock absorbing base (except Drum controllers 7-circuit size or below, which have rigid base); horizontal surface mounting by four ¼ screws. **Switches:** Staley Metal mercury types rated 20, 12, 7 and 5 amps non-inductive at 125, 250, 440 and 550 v. AC respectively. **Cycle Time:** From 0.6 seconds to 1 hour. **Motors:** Shaded-pole gear type for 110 v. AC, 60 cps, 35 watts. Drum controllers not supplied with motors. **Cams:** 3-piece split, single-lobe type. **Times Adjustment:** 1¼% to 98¼% of total cycle time for 12-second cycles or longer; "On" or "Off"; 3¼% to 96¼% for 3 to 12-second cycles. **Cam Switch Repeatability:** ±½° for 12-second and longer cycles, ±5° for 0.6-second cycle. **Number of SPST Circuits:** Up to 60—see individual models for particulars. **Specify, when ordering:** Number of circuits required, time cycle and optional equipment must be specified when ordering. See price list cost variations and options available.

MODEL 200

Workhorse of the line. Versatile unit performs all required controller functions in 80% of all applications. Comes with single, mounted motor. Available in from 1 to 30 SPST circuit styles.

MODEL 635

Operated by two geared motors of different speeds. The faster motor is coupled to the cam shaft through overriding clutches to provide quick recycling. Automatic recycling is achieved with a switch on the controller itself. Comes with two, mounted motors. Available in from 2 to 30 SPST circuit styles.

MODEL 802

Actually two controllers (or more) in one. Employs two cam shafts on a single motor with compound gear assembly for automatic control of two time cycles. Standard cycle times from 0.6 second to one hour on one shaft; up to 64 times as long on the other. Complete with single, mounted motor. Available in from 2 to 30 SPST circuit styles.

MODEL 702

Vertical stacking model for applications where limited horizontal space is available. Comes with single, mounted motor. Choice of from 2 to 60 SPST circuits arranged on 2, 3, or 4 levels.

MODEL 648 CONTROLLER

Same as Model 200 timer, but without motor. Used where on external power source, supplied by the equipment being controlled, is available. Without motor. Shaft ¾" dia., extends 1½" beyond base. Available in from 1 to 30 SPST circuits (up through 7 circuits with rigid base; others, shock-absorbing base).

MODEL 748 CONTROLLER

Same as Model 702 timer, but without motor for use with external power sources; and where horizontal space is limited so as to require vertical stacking of cams. Without motor. Shaft, ¾" dia., extends 1½" beyond base. Available in from 2 to 60 circuits arranged on 2, 3, or 4 levels (2-14 circuits on 2-level, 3-21 circuits on 3-level, and 4-28 circuits on 4-level versions come with rigid base; other, shock-absorbing base).

1,601 to 2,000 KC .005% TOL. 3.55

2,001 to 11,000 KC .005% TOL. 3.25

All TEXAS CRYSTALS are cut, lapped, and etched to exact frequencies. They are supplied for oscillator circuits having 32 MMFD capacity, unless otherwise ordered, as the crystal frequency will vary with capacity of the circuit.

Low frequency crystals from 1001 KC to 2100 KC are space mounted — all others are pressure mounted. The advantage of the pressure mount crystal is its ability to handle more current (up to 50 Milliwatts) without capacity (if known) or type of equipment in which it is to be used.

HERMETICALLY SEALED CRYSTALS MADE TO ORDER

In recent years, manufacturers have engineered new equipment utilizing the hermetically sealed plated crystal (HC6/U). This crystal is either gold or silver plated, the plating acting as electrodes. These crystals should be used in circuits designed for them as the maximum current capacity is 10 milliwatts (5 milliwatts for overtone type). High stability of frequency is a characteristic of this crystal. All TEXAS CRYSTALS are made to conform with military specifications. When ordering for G.E.,

Motorola, Link, etc., for split channel operation, a sample of both transmitting and receiving crystals known to be correct, be sent us with order specifying exact crystal frequency desired. We will correlate crystals and return your samples. Type HC6/U has .050 pins and fits CE-1 socket. Type HC17/U is the same physical size except the pins are .093 diameter. Specify type circuit, if known. Order by fundamental frequency, type circuit, type holder. All plated crystals are .005% tolerance.

Instant Lettering

®

THE REVOLUTIONARY METHOD FOR MARKING ELECTRONIC EQUIPMENT

JUST RUB...and it's printed!

Sharp • Clean • Fast • Not a Decal • No Water • No Tapes

INSTANT LETTERING® marking kits bring you all the necessary elements for completely marking electronic equipment, prototypes, drawings, etc. in this fast new easy-to-use form. There's even a new drafting symbol kit for better more readable schematics.

Words, letters, numerals, switch patterns, arcs, drafting symbols, etc. are printed on a special transparent carrier film. Rubbing over one of these elements with a ballpoint pen releases it from the carrier film and adheres it to your working surface.

INSTANT LETTERING® words and symbols transfer to almost any surface including glass, plastic, even painted and bare metals. Now you can quickly mark all panels, even especially calibrated two-color nomenclatures, pilot light jewels, sub-assemblies, circuit boards, etc. Reproduction quality **INSTANT LETTERING®** transfers are clean and sharp, leave no background haze or film, make prototypes look like finished production equipment and give all equipment and drawings a professional look.

TITLES FOR ELECTRONIC EQUIPMENT
Hundreds of preprinted titles researched to give up to 95% of all electronic marking. For labeling, marking, titling all electronic control panels, drawings, prototypes, etc.

- Once applied, a DRI-TRANSFER® image will not peel, crack or blister when exposed to heat, chemicals or mechanical action of copy machines.
- Titles, captions and notations down to the smallest letters and numbers are always sharply defined.
- Perfect for prints, spec sheets, layouts, files, folders, cards, name plates, slides, equipment marking, identification, printed circuit artwork, prototypes, control panels, etc.
- Errors easily rectified with rubber cement or k-up or eraser.
- Clear lacquer spray gives ultimate permanence when transferred to metal or glass surfaces.
- Color: Black only.

Radio Interference Filter

RESIDENTIAL, LIGHT COMMERCIAL RFI FILTERS

These QUIETONE® Radio Interference filters are designed for residential and light commercial applications on appliances and office machines. Noise from small portable electrical appliances can usually be reduced through use of a circuit 1 filter. The circuit 2 filter, IF-6, will provide slightly more reduction. The greatest attenuation will be achieved through the use of circuit 4 filters — IF-18 and 19.

CDE Type	Circuit Diagram	Voltage	Cap. Mfd.	Current	Description
IF-4	1	110 AC/DC	.1	5	Plastic cylindrical filter with plug and receptacle
IF-6	2	110 AC/DC	2 x .1	5	Plastic cylindrical filter with plug, receptacle and side ground terminal
IF-18	4	115 AC/DC	2 x .25	5	Rectangular plastic cased filter with line cord and plug, receptacle and ground terminal.
IF-19	4	115 AC/DC	2 x .1	5	Smaller rectangular plastic cased filter with line cord and plug, receptacle and ground terminal.

COMMERCIAL RADIO INTERFERENCE FILTERS

The NF-1C230 is designed for installation in vacuum cleaners, floor polishers, etc. Other filters listed are UL listed for fluorescent fixtures but are frequently applied to other equipment. The vehicular filters listed on the following page also find wide industrial applications.

CDE Type	Voltage	Cap. (Mfd.)	Current	Description
IF-24	110 AC/DC	2 x .1	—	Cylindrical metal cased with flexible leads and bracket
IF-54	110-220 AC/DC	2 x .25	2	Rectangular metal cased filter with flexible leads
NF-10431	280 AC/DC	2 x .02 each line	2 x 3.5	Fluorescent light filter rectangular metal case with flexible leads
NF-10431-1	280 AC/DC	2 x .02 each line	2 x 3.5	Same as NF10431, but with mounting for direct replacement of GE Catalog 89G365
NF-1C230	125 AC/DC	.09 line to line 2 x .005 line to grd.	—	Cardboard cased filter for vacuum cleaners and other light appliances
NF-10280-1	125 AC/300 DC	2 x 1.0 each line	2 x 2.5	Fluorescent light filter with solder lug terminals

VEHICULAR FILTERS

The most frequent Radio Interference problem encountered by the service technician is the improvement in signal to noise ratio in mobile applications of Citizen's Band, commercial, and amateur high frequency communications equipment. The vehicular filters listed will solve the problems encountered provided good grounding and bonding practices are followed and use made of suppressors.

ALL NYLON FASTENINGS

Ytel 101 per MIL P 20693 Spec., MIL S 7742 Spec. Birmbach All-Nylon Fastenings are made of Zytel 101, a Polyamide plastic of the Nylon 6.6 Type. They offer outstanding insulating properties plus resistance to heat, shock, vibration and chemical solvents plus lightness elasticity and superior torque strength. In most cases, because of their high dielectric strength, they eliminate the need of bushings, washers or other insulation. They are corrosion resistant, non-magnetic and good torque strength over a wide temperature range. Continuous service temperature to 300°F (150°C). Stock color: Natural. Additional colors & types available to order. Ytel 101 per MIL-D-7019B.— All parts are manufactured to American Thread Standards to a class 2A or 2B fit. Model 153—A Combination

SIGNAL GENERATOR and SIGNAL TRACER

The true test of the claim "two instruments in one!" is: can each of the two units be used separately as well as in conjunction with each other? In the case of this versatile combination instrument, the answer is emphatically yes, for, the Signal Generator will function as a full service instrument with a range of 250 Kilocycles to 120 Megacycles and the Signal Tracer will follow any signal whether generated by a broadcasting station or injected by the

Signal Generator section of Model 153. When used in combination with no dependence on outside signals, the compatibility of Model 153 provides ideal service, for, unlike any standard signal tracer, the Model 153 injects its own signal then traces that controllable signal to locate the source of trouble whether due to component or circuit by standard signal tracing technique.

SPECIFICATIONS:

SIGNAL TRACER: ● Hi-gain cascode pre-amplifier ● Pre-amplifier output available at front panel jacks for use with VTVM, oscilloscope or phones. ● Low distortion triode output stage. ● Audio Attenuator provided to prevent high signal overloading. ● 4½ inch permanent magnet speaker. ● Separate R.F. and Audio Signal tracing probes.

SIGNAL GENERATOR ● Covers from 250 KC to 120 MC in

5 bands. ● All popular and most used frequencies marked on panel in color. ● High stability electron coupled R.F. oscillator. ● Attenuator used on both R.F. and Audio circuits.

Model 153 comes complete with all necessary probes. Net Price

TEST ALL TRANSISTORS . . . EXCEPTION . . . AND ALL . . . TRANSISTOR OPERATED DEVICES

With New Model 158 TRANSISTOR RADIO TESTER

SEE Read the relative gain and leakage of any transistor directly on the meter. HEAR All audio stage signals through the front panel speaker

Simplified procedure —

Model 158 ① Injects a signal ② Follows the injected signal through each and every stage including all transistors!

Specifications:

TESTING TRANSISTORS WITH MODEL 158

The Model 158 will test all transistors including NPN and PNP, Silicon and Germanium types, without referring to characteristic data sheets. The time-saving advantage of this method is self-evident. A further benefit of this service is that it will enable you to test new transistors as they are released, since no characteristic sheets are required.

TESTING TRANSISTOR RADIOS AND OTHER TRANSISTOR DEVICES WITH MODEL 158

An R.F. signal source modulated by an audio tone is injected into the transistor radio from the antenna through the R.F. stage past the mixer into the I.F. amplifier and detector stages and on to the audio amplifier. This injected signal is followed and traced through the receiver by means of the signal tracing section incorporated in the Model 158. The injected signal is heard on the front panel speaker as it is followed through the various stages.

Model 159 TESTS AND REJUVENATES ALL PICTURE TUBES

ALL BLACK AND WHITE TUBES . . .

From 50 degree to 110 degree types — from 8" to 30" types.

ALL COLOR TUBES . . .

Test ALL picture tubes — in the carton — out of the carton — in the set!

Specifications:

Provides separate filament operating voltages for the older 6.3 types and the newer 8.4 types.

Properly tests the red, green and blue sections of color tubes individually — for each section of a color tube contains its own filament, plate, grid and cathode.

Detects tubes which are apparently good but require rejuvenation. Such tubes will provide a picture seemingly good but lacking in proper definition, contrast and focus.

Rejuvenation: Model 159 applies a selective low voltage uniformly to assure increased life with no danger of cathode damage.

Model 159 comes housed in a beautiful portable carrying case. Complete with sockets for black and white tubes and color tubes. Net price

Beckman®**TEST and MEASURING INSTRUMENTS****RESISTANCE DECADES Model DR Series**

High-Precision and Stability • Low Zero-Resistance • Long-Life Switches.

DR units provide convenient selection of precise resistance values. Typical applications are found in the areas of circuit design in simulation of various factors, and as standards in bridge-type measurements.

Standard units are available with 3, 5, or 7-dials. Each decade inserts a precise ohmic resistance in series with the terminals. The basic ohmic value on any decade may be multiplied by factors of 0, 1, 2, 3, thru 10, by setting its dial at the appropriate step.

Switches are 12 position, 360-degree type. Actual resistance is the sum of zero-resistance and indicated resistance. Model DR units provide zero-resistance of less than 0.003 ohm per decade.

CAPACITANCE DECADES Model DK Series

Model DK units provide convenient selection of precise capacitance values with direct reading on the dial. Typical applications are found in bridge measurements and in experimental work such as circuit design. Standard units are 3-dial types. Paralleling switches provide steps of 0 to 10 by combining four capacity values. All capacitance is connected across the terminals.

Capacitors are adjusted to the accuracies listed. That increments are correctly indicated on the dial. Zero-capacitance is less than 35 pf. Silver-mica mylar dielectrics are used to obtain low-loss, high stability characteristics.

Electrical Testing and Speed Measuring Instruments

BLONDER-TONGUE

"Standards for Industry" Lab-Line

Designed specifically for the cable distribution industry and for those working with RF in research, development and production. All items are designed to match to 75 ohms and are not merely an adaptation of 50-ohm gear to our standard impedance. Units are of wide band design to cover all TV channels.

4122

FSM-2

4102

4122 U/V Sweep Generator—Solid-state all channel sweep generator has two switch-selected, electronically swept ranges: entire UHF TV Spectrum (470 to 890 mc); entire VHF TV Spectrum including sub-channels (20 to 240 mc).

Sweep widths are continuously variable from 5 mc to the entire VHF or UHF range in one sweep. Center frequency can be tuned across the complete band on each range regardless of the sweep width setting. An output level attenuator is adjustable over a 60 db range. Automatic Level Control (ALC) on both ranges assures constant output. Fully regulated power supply for stable operation.

The sweep oscillator is varactor-tuned (no moving parts) for silent operation and long life. For VHF output, the UHF sweep is mixed with a fixed oscillator signal and the resultant difference signal is amplified and level controlled to cover the complete VHF TV spectrum. The horizontal sweep rate of 60 cps derived from the power line, is available as a sine-wave at the front panel for connection to the oscilloscope. Use of the sine-wave horizontal permits oscilloscopes to be fed by available local line voltage for summation sweeps of large distribution systems. This feature makes the 4122 ideal for feeding a production test line. \$595.

4114 UHF Sweep Generator—Same features as Model 4122, but the range of 470-890 mc only. Provision is made for sweep widths down to a few mc or up to the complete 420-mc range. The center frequency can be tuned across the complete range. \$325.

FSM-2 UHF/VHF Field Strength Meter—Instantly convertible from VHF to UHF with the flip of a switch. Accurate and portable. Measures RF signals at 75 ohms impedance (VHF/UHF balun supplied for 300 ohm measurements) in two ranges: VHF (54-216 mc) and UHF (470-890 mc). Sensitivity variable from 100 microvolts to 3 v for full scale meter deflection. Reads both average and peak level by means of separate built-in detectors. Solid state circuitry. Very stable in operation. Battery and power line operation. Fully regulated power supply. \$395.

4102 R. F. Switcher—Double-pole, double-throw, 75-ohm coaxial switch with a frequency range of DC-900 mc. It can be operated manually or automatically at a 30-cps rate. Fully solid state.

Ideally suited for making direct, immediate comparisons between input and output voltages of any circuit under test; for precisely measuring VSWR, amplifier gain or attenuation; and other application involving equipment performance evaluation against given standards. It can serve as a general laboratory oscilloscope switch. It permits two signals to be simultaneously displayed on an oscilloscope. Switching between the two signals is at the rate of 30 cps.

Either signal can be seen independently, or both may be seen superimposed. Employs four hermetically sealed S.P.S.T. switches, activated by solid state circuitry for accurate, dependable performance. Comparison measurements are free from errors due to scope calibration, nonlinearity or detector law characteristics. Provision for 360° phase adjustment. \$250.

4107 Delay Line—Precision 75-ohm coaxial delay line for use as a match cable for impedance measurements and other laboratory applications where a standard cable of superior quality is required. Provides an accurate impedance standard for making fast and accurate VSWR measurements over a very wide bandwidth. \$125.

4113 50/75 ohm Matchpad (DC-900mc)—Precision resistive, minimum loss, 50 to 75-ohm matchpad for the frequency range DC-900 mc. Used to match other test equipment with 50-ohm impedance to 75-ohm equipment. \$25.

4111 Fixed Attenuators (DC-900mc)—Precision attenuator pads for 75-ohm applications available in values of 1, 2, 3, 6, 10 and 20 db attenuation. Accuracy: 1 db $\pm$ 0.1 db thru 20 db $\pm$ 1 db. \$20.00.

4121 UHF/VHF Switch Attenuator (DC-900mc)—Covers entire UHF/VHF frequency range. 62 db total attenuation, switchable in 1 db steps. 75-ohm impedance. BTF connectors are used with mating male connectors supplied. \$40.

4123 High Output Detector (20-216mc)—Extremely sensitive, enables VSWR measurement of some devices without using external amplifier and gives usable output from extremely small input signals. \$50.

4124 VHF Return Loss Bridge (30-216mc)—Fast, accurate wide band measurement of return loss (VSWR). Especially useful when the return loss is high. Standard 75-ohm impedance. \$50.

4105 75/300 ohm Matching Transformer (10-216mc)—Wide band VHF transformer for precision applications. Matches balanced signals at 300 ohm to unbalanced signals at 75 ohms, or vice versa. \$30.

4104 75-Ohm Detector (10-900mc)—Sensitive, thru-line type, RF detector used for insertion into a line or as terminated detector (precision termination plug supplied). Type BTF coax connectors. \$40.

4103 50-75 ohm Transformer (10-216mc)—Wide band VHF 50- to 75-ohm transformer for critical laboratory applications. Matches test equipment with 50-ohms impedance to 75-ohm equipment. \$30.

4112 UHF Matching Transformer (470-900mc)—Low-loss, wide band, UHF, 75- to 300-ohm transformer (balun). Matches balanced UHF signals at 300-ohms impedance, to unbalanced signals at 75-ohms impedance, or vice-versa. \$35.

4106 75-ohm Two-Way Hybrid Splitter/Mixer (10-216mc)—VHF 75-ohm, two-way hybrid splitter/mixer. Useful for critical lab test set-ups where low VSWR and high isolation are needed. \$30.

Freed invites requests for quotations on special insulation testing instruments, either deviations of above listed standard units or new designs for system application.

NON-DESTRUCTIVE D.C. VOLTAGE BREAKDOWN EQUIPMENT

Freed can supply non-destructive voltage breakdown testers for applications where the d.c. test voltage must be removed within microseconds in the event of a breakdown. Simultaneously the component under test is short circuited to prevent it from being damaged by its own capacitive charge.

The instrument contains a variable slope ramp generator to apply the test voltage in applications where the capacitive current in the test sample exceeds the preset leakage current limit. An indicating voltmeter holds the reading of the breakdown voltage until reset.

LOW FREQUENCY "Q" INDICATORS

Direct indication of "Q" at low frequencies, inductance, distributed capacity, impedance and dielectric loss can also be measured. Instrument may be used to study the magnetic properties of iron core material for stability as a function of applied voltage and losses as a function of the frequency.

Two units are available, the 1030-A indicates "Q" as a product of meter readings multiplied by dial settings, the 1030-B displays "Q" directly in digital readout.

Type	Test Frequency	Q Range	Accuracy	Test Voltage	Power Requirements	Dimensions and Weight

INCREMENTAL INDUCTANCE BRIDGES

ect in-line readings of inductance and conductance of iron core component audio frequencies with or without superimposed direct current. The bridge s the Owens circuit with provisions for measuring the series or parallel inductance and conductance of the unknown inductor; five precision resistance

and capacitance decades are provided to indicate these values. "Q" or storage factor can be measured as the product of the inductive reactance and the conductance.

BIG LOOK

BIG LOOK PANEL METERS

Accurate, quick reading with wide, border-to-border scales; free from shadows. Most popular meter design with low-profile, easy-to-read sense. Aluminum frame holds reflections to a minimum. Big, bold numerals over clearly marked divisions for fast reading. Tapered pointers assure high accuracy. Taut-band suspension provided on all models except $1\frac{1}{2}$ " size. Standard $2\frac{1}{2}$ " and $3\frac{1}{2}$ " models come with sealed cases to protect against hair, dust, chemicals or other foreign particles. Self-shielded DC mechanisms; Snap-on, snap-off covers.

Handsome, easy-to-read meters in two styles for all panel and control applications. All DC meters have self-shielded movement with pivot and jewel or taut-band suspension. Taut-band designs give great resistance to shock and increased sensitivity. Zener-diode, expanded-scale voltmeters available for improved narrow-range accuracy on $3\frac{1}{2}$ " and $4\frac{1}{2}$ " sizes. Snap-on, snap-off covers on meters. All types meet ASA Specification C-39.1.

Accuracy: $\pm 2\%$ FS, all DC and AC iron vane; $\pm 3\%$ FS, AC rectifier type (with 60-cycle sine wave at 25° C); $\pm 0.5\%$ of midspan, expanded-scale types. **Overload:** 20% momentary and sustained; voltmeters; 10 times rated current for 10 consecutive intervals of $\frac{1}{2}$ -sec. with 1-min. interval between successive applications, momentary; 20% for 8 hours, sustained, ammeters. **Scale:** Pivot and jewel, 90° rotation; taut-band, 100°.

Insulation: 2600 V rms hi-pot for all but $1\frac{1}{2}$ " models (1600 V rms). **Response Time:** Meet or exceed ASA requirements: 3 sec. max. for microammeters; 2 sec. max. all other DC ratings; 2.5 sec. max. AC ratings. **Damping:** 40% max. overshoot; 2.5 min. damping factor. **Burden:** 5 amps, 0.5 VA, 0.5 power factor for AC ammeter; unity power factor, AC voltmeter.

HORIZON LINE PANEL METERS

Distinctive, low profile design for sophisticated styling. Best readab with swept-back windows to deflect light from line of sight. Both $3\frac{1}{2}$ " and $4\frac{1}{2}$ " meters may be mounted semi-flush or back-of-panel, recessed face silhouetted by half-bezel frame to conserve space and improve readability. DC types have core-magnet d'Arsonval movement with pivot and jewel, or taut-band suspensions; self-shielded for use on any panel. Zener-diode, expanded-scale voltmeters available. Snap-on, snap-off covers supplied on $4\frac{1}{2}$ " size.

HIPOTRONICS AC/DC HIPOT TESTERS & MEGOHMMETER

MODEL 306B

300 SERIES

The 300 series of Hipot Testers and Megohmmeters are voltage test sets which perform three different functions. They may be used for AC Hipot, DC Hipot and DC megohm tests. The "A" units perform IR tests to 1000 megohms and the "B" units to 100,000 megohms at 500 volts. Megohms at any other voltage may be determined from the volt and current meter readings.

- The sensitive thyatron operated overload relay adjustable from 20 microamperes to 5 milliamperes, will in many applications, permit non-destructive hipot tests to be performed.
- When the overload is set to 20 ua, the high voltage will generally trip on the build-up of leakage current before actual arc-over occurs.
- The "B" series has a quadruple range current meter which permits leakage currents as low as 0.01 ua to be read.
- The "A" series permits the reading of currents down to 1.0 ua.
- The KV meter has two ranges and is connected directly at the output for maximum accuracy.
- Other features include an AC input switch, fuse and pilot light, front panel output jacks, continuously adjustable output control, guard circuit on "B" series, and a failure light with reset button.
- Housed in a totally enclosed dust-proof cabinet.

Size: 17" W x 9½" H x 11" D

Weight: 115 volts, 60 cps, 1 ampere — all models

Input: 20 pounds

- Voltage to 6 KV, megohms to 100,000
- Overload adjustable from 20 microamperes to 5 ma.
- Performs non-destructive quantitative tests.

HIPOTRONICS MEGOHMMETERS

Hipotronics megohmmeters are precision instruments for use in production or laboratory testing of cables, capacitors, printed circuits, transformers, electronic assemblies, etc.

- The output voltages are both regulated with a ferro-resonant line and a solid state electronic regulator. Even with large capacitive loads on the 20 million range, there is no bounce.
- The indicating device is a high quality Weston with better than 2% accuracies on all ranges below 1 million and 3% on 10 million. The VTVM circuit driving the meter on the higher range models has no zero shift on any range.
- The short circuit protection is such that the output may be continuously shorted without injury to any component.
- Self contained calibrating resistors in the quadruple range models permit the operator to periodically verify the calibration.
- A three terminal output network (positive, negative and guard) permits grounded or ungrounded tests to be made.
- Dual color scale on multiple output voltage models improves readability.
- The units also contain a resistor and switch position for discharging both the internal and load capacitance.
- Available in 7 models, all with 115 Volt, 60 cps input and AC input switch, fuse and pilot light.

HIPOTRONICS NON-DESTRUCTIVE HIPOT & INSULATION TESTERS

NON-DESTRUCTIVE HIPOT TESTERS

Non destructive hipot tests may be made on many materials, components, test specimens etc. if a sensitive overload, coupled with a high speed HV cut-off is incorporated into an insulation tester. Hipotronics 100 series of hipot testers have a thyatron operated overload relay which cuts-out the HV in 5 milliseconds or less with leakage currents as low as 20 microamperes. The overload, when set on 20 μ a, will generally trip the HV on corona and leakage currents which precede an actual breakdown, puncture or flash-over. The overload is continuously adjustable from 20 μ a to 5 ma which enables the user to draw 5 milliampers for capacitor charging, cable testing, power supply etc.

HOYT ELECTRICAL INSTRUMENTS

For Original Equipment and Replacement Applications

HOYT moving-coil Meters are built on the d'Arsonval principle using carefully selected jewel bearings and polished steel pivots. Accuracy within 2%. Alnico Magnets with soft-iron pole-pieces of uniform flux density used in all movements. Permanently correct balance assured by HOYT "cross arm" spiral wire balance. High torque to weight ratio. Quick response and good damping under all conditions. Choice of "knife-edge" or "lance" type pointers. Full 100° movements standard on most models. Many special type cases available. Inquiries invited.

VIBRATING REED FREQUENCY METERS

J-B-T INSTRUMENTS, INC.

• **USES** — J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, and television service, on engine generator sets, in laboratories, in many types of electronic equipment, on panel and control boards, in inspection set-ups—wherever constant or known frequency is important to efficient operation of equipment. More than 25 years of continuous experience covering many thousands of these instruments are your assurance of quality for both commercial and defense applications.

• **OPERATING PRINCIPLE** — The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. Each reed is adjusted to respond by resonance to but one frequency. As the current excites the driving coil, the reed "in tune" with the frequency in the coil will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. To determine frequency, simply read the reed.

• **RESPONSE PATTERNS** — These patterns differ with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right. In general, the lower the frequency the greater the amplitude, the higher the frequency the less the amplitude. Thus a 12 cycle reed normally will have substantially greater amplitude than a 1000 cycle reed.

• **ADVANTAGES** — Guaranteed accuracy at reference temperatures of 77°F is $\pm 0.3\%$ or better of the AC frequency being measured, unless otherwise stated. Accuracy on interrupted DC may be somewhat less. High fatigue safety factor for continuous operation. Temperature compensations are not required as temperature coefficient of reeds is only approximately 75 parts per million per degree F., negative.

• **STABILITY** — All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Wave form or external fields do not ordinarily have an adverse effect. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.

• **TRUST THE METER** — If a meter plugged in on a 60-cycle AC power line does not indicate exactly 60 cycles, trust the meter! Power supply may momentarily be off-frequency due to changing load conditions. All J-B-T Frequency Meters are meticulously calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standards frequency signals.

5 OR 7 REEDS

Used on standby power equipment. Handy for accurately measuring frequency of power source, 5 reeds (as illustrated), 58-62 cycles, or 7 reeds, 57-63 cycles, 100-130 volts. Other characteristics and accuracy same as Model 30-F. See Table of Dimensions, lines 4 and 5.

31-FX, 58-62 cy., 5 reeds, 3-1/2" Molded case, MIL-M-6B mtg. \$23.65

31-FX-7, 57-63 cy., 7 reeds, 3-1/2" Molded case, MIL-M-6B mtg. \$25.85

3" SQUARE-CASED FREQUENCY METERS

The meters described above are also available with square black molded cases designated as **FS series** per print SK-59, Rev. E. For example, 30-FS is same as 30-FX except for the case.

REVISED DIAL APPEARANCE

Certain shipments during the life of this catalog will contain different dials from those pictured on these pages. Dials are being modified to show the revised J-B-T trademark adopted during the Silver Anniversary Year. At the same time, some 3 1/2" frequency meters may also carry the phrase Series A after the model number (as in 34-FX below) to denote improved ruggedness and sensitivity. Such instruments are completely interchangeable as to mounting dimensions and circuit requirements with the meters in this publication.

18 OR 21 REEDS

Advanced design offers 21 reeds in an interchangeable 3 1/2" panel meter with 2-cycle intervals for close reading over the band of 380 to 420 cycles per second. Accuracy $\pm 0.3\%$ at reference temperature. The reed flag is necessarily smaller than in a 9-400-cycle meter, such as the model 33-FX, but the 21 reeds are located on an enlarged window 2" wide and flags 3/8" high x 1/4" wide to give maximum readability. A patented internal construction for mounting the reeds one clamp assures ruggedness. The instruments and their variations are particularly useful where unusual close indication of frequency through out the band is desirable. See Table of Dimensions, line 5. All have Molded Case, MIL-M-6B mounting \$26.65

3 1/2" SEALED FREQUENCY METERS

X TYPE Sealed meters, glass-steel construction, with solder flange and detachable flange, supersede the former FHX sealed meters. While JAN-I-6, MIL-M-6B, MIL-M-10304B (Type MR36) do refer specifically to frequency meters, the FHXX series uses front mounting dimensions of the specifications, and meets or exceeds the sealing and electrical requirements including 3000 volt breakdown. Electrical characteristics and accuracy are the same as corresponding F models with the HHX designation. Sampling procedure includes a test in which the absolute pressure of the air above the water is reduced to 2.5 inches of mercury (approx. 57,000 ft. altitude) and is maintained for one minute. For dimensions, see Table, Line 8, and Print 1 Rev. E. Standard voltage is 100-130.

NOTE ON METER VOLTAGE

J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made for the purpose of using at two or more voltages, not additional phases.

ELAPSED TIME METERS AND REED RELAYS

J-B-T INSTRUMENTS, INC.

BASIC 3 1/2" ELAPSED TIME METERS

• USES AND ADVANTAGES OF ELAPSED (OR RUNNING) TIME METERS

To record operating time of AC electrical and electronic equipment, these self-starting synchronous instruments normally register in 1/10th hour steps to 9,999.9 or 99,999.9 hours, then automatically reset. They are widely used for tube life, TV equipment, punch presses, conveyors; oil burners, ground support equipment, maintenance schedules, etc. J-B-T engineers recommend the AC type of elapsed time meter for superior accuracy, especially where voltage or ambient temperature vary widely.

6-Digit WIDE-NUMERAL ELAPSED TIME METERS

MODEL 31-EXW. Newest most easily-read, and most versatile of J-B-T elapsed time meters is Model 31-EXW, illustrated. Easily-read, wide 6-digit numerals register to 99,999.9 hours then automatically reset. Distinctive contemporary dial shows tenths in black on white, and units in white on black. The 3 1/2" black molded case is interchangeable with Model 31-EX and FX types of frequency meters. Print SK-125 gives mounting information.

Model 31-EXW, 6-digits, 0-99,999.9 hours, 60 cy., 110-125 volts. \$16.95

SQUARE-CASED ELAPSED TIME METERS

MODEL 31-ES. A square black molded case, matching other 3" x 3" meters, differentiates this model from the round 31-EX. Ask for Print SK-110, Rev. F showing standard rear mounting 2 1/4" bet. centers of molded-in studs, near rugged case with overall depth 3-11/32" behind flange, and electrical studs on center line. Variations can be made for 99,999 hours (suffix U), 230 volts, minutes, matte finish, or 50 cycles.

31-ES, 60 cy., 110-125 volts, 0-9,999.9 hours. \$17.50

3 1/2" SEALED ELAPSED TIME METERS - 60 Cycles

MODEL 31-EHXX. Where rugged requirements make a completely sealed elapsed time meter desirable, this glass-to-metal construction with flat glass front and 3 1/2" diameter separable flange, often is specified. Heavy-duty solder terminals are supplied. Every instrument is checked in a vacuum chamber. Over-all dimensions and appearances match the FHXX series sealed frequency meters. Maximum voltage between terminals and case, 1,000 volts, R.M.S. The meter registers in 1/10 hour steps to 9,999.9 hours, then automatically resets. Tenths indicator is red on white, all others in white on black. Mount according to SK-85, Rev. C.

31-EHXX, 60 cy., 110-125 volts. \$19.75

3 1/2" SEALED ELAPSED TIME METERS - 400 Cycles

MODEL 31-EHXX. This stable, self-starting 400-cycle elapsed time meter is extensively used for preventive maintenance and for reliability testing and checking in a wide variety of equipment. The instrument is entirely enclosed in a 3 1/2" flanged case, glass-to-metal sealed construction with separable flange, heavy-duty solder terminals; flat glass front. 1/10 hours are shown in red on white, all other numerals white on black. The external appearance matches FHXX frequency meter series. For dimensional details see SK-61, Rev. B.

MODEL 21-EHXX. A full size counter reading 9,999.9 hours in 1/10 hour steps and a rugged self-starting synchronous motor are built into this 2 1/2" sealed meter. Its front mounting dimensions are the same as Type MR26 electrical indicating instruments in MIL-M-6B. Glass-to-metal seal makes the instrument completely tamper-proof. Ask for Print SK-68, Rev. G. (2 1/2" 400-cycle meter, **Model 23-EHXX** also is made on special order.)

21-EHXX, 60 cy., 110-125 volts. \$26.00

MODEL 31-EX. This self-starting instrument registers to 9,999.9 hours in 1/10 hour steps before automatically resetting. Red numerals on white are used for tenths, all others are white on black. Black molded case matches FX series 3 1/2" frequency meters and completely encloses all parts. This case, with centered terminals, meets type MR34 or MR35 mounting dimensions of MIL-M-6B, also JAN-1-6. Referring to line 5 of the Table of Dimensions on the preceding page, barrel depth (B) is 2 1/4", stud height above center (G) is zero, dimension (F) is 1/2", and all other measurements are as shown. Inquiries are invited on smaller sizes to MIL-M-7793C and subsequent revisions as they are released.

ELAPSED TIME - FREQUENCY METERS

31-FE SERIES. To conserve panel space and centralize information, this panel instrument combines elapsed time or running time meter with frequency reads. It is used on motor generator sets and on electrical equipment where maintenance routine calls for periodic servicing. The J-B-T design, proved by years of field experience, uses a separate exciting coil for the reeds to achieve close control of reed amplitude and frequency. Reads 0-9,999.9 hours and 58-62 cy. with 5 reads, for 100-130 volt operation; self starting. Tenths shown in red on white, all other numerals in white on black. FOR APPLIANCE SERVICING, QUALITY INSPECTION, AND LABORATORY SET-UPS

OVEN OR HEAT CHAMBER TESTERS

MODEL 23-JP-1. This popular portable indicating pyrometer saves time and furnishes reliable information in testing and setting thermostats on electric or gas ranges and other appliances by showing oven temperatures as they change. Standard size dial, 0-650°F, with 2 3/4" scale arc reading, is used but covered by clear-plastic in black metal front. The indicator is mounted on a black metal panel affixed inside a pocket-sized, black top-grain leather case 4 1/2" x 2 7/8" x 4 1/4" over hardware. Characteristic of more expensive pyrometers, the 23-JP-1 is automatically compensated for ambient temperature. Thus the eliminates calculations, avoids likelihood of serious error as temperature changes inside the instrument itself, and provides reliable direct readings. Supplied attached SA-116, 5 1/2" calibrated thermocouple, clip, and convection shield \$26.00

Trade discounts apply in most cases where LIST PRICES are shown.

Since previous editions of the MASTER are frequently referred to, it is important, when ordering, to mention specifically the edition and page number, also the catalog number of each item. This will avoid possible confusion and delay.

While most distributors maintain a large and varied stock, they do not represent that they stock all manufacturers' products shown in this MASTER catalog.

Fast, accurate point to point circuit testing

PARAGON PRO-GLO Circuit Testers are simple, inexpensive, easy-to-use instruments for checking non-energized circuits. This little pen-size unit accurately checks for polarity, shorts and opens and continuity in circuits with resistance up to 10 ohms.

The PARAGON PRO-GLO tester consists simply of a plastic case containing two AA penlight batteries and a #222 lamp, a pointed probe and a three-ft. lead wire with alligator. The lead wire holds a new probe protector.

Servicemen and home repairmen appreciate the ease of use of this simple tester.

Signal light at point of contact eliminates necessity for shifting eyes to read meter. Speed and accuracy of testing is increased.

Low cost of device makes it practical for mass distribution in large service centers. Long operating life is assured—probe and battery contact spring are tin-plated beryllium copper, case is high-impact plastic and wire is heavy-duty, flexible test lead. **DEALER NET PRICE \$1.33**

- FARM USES

Probe-Protector Included

New! Vinyl extrusion Probe - Protector glides easily on the cord—can't be mislaid. Slips over Probe when circuit tester is not being used. This prevents accidental contact with metal that could create a circuit thus minimizing unnecessary battery burn-out.

WG-270A Accessory Carrying Case for WV-38A VOM \$4.95*

The Compact WA-44C is ac operated from a 50-to-60 cycle, 105-125 volt source, and covers in four bands a range from 20 cps to 200,000 cps. Can be used for a wide variety of applications, including the measurement of frequency response characteristics of audio amplifiers, and the testing of loudspeakers and enclosures or finding the impedance of LC combinations. Width 10 1/16", Height 7", Depth 6 1/8".

The circuit of the sine-wave function consists of a "Bridged-T" oscillator with a cathode follower output stage. The square-wave output is developed by using the sine-wave oscillator output to drive a clipping and shaping circuit. Produces a stable signal with an amplitude variation of not more than ± 1.5 db. Total harmonic distortion is limited to 0.25% over the range of 30 cps to 15 kc.

- Switch selection for sinewave or squarewave output
- Simple one-scale dial
- Separate 60 cps output for intermodulation distortion measurements
- Wide frequency range, 20 cps to 200,000 cps.
- Less than 1% of 1% distortion over the audio-frequency range

NEW FEATURES:

- Crystal-controlled RF oscillator for stable picture carrier
- Convenient front-panel gun killing switches.

For checking over-all operation of Color-TV receivers. A "must" for adjusting and trouble-shooting color phasing and matrixing circuits. Generates signals for producing ten bars of different colors simultaneously. Also provides extremely stable fine-line crosshatch and dot patterns free from "jitter" and "crawl". Fixed number of bars and dots facilitate adjustment of over-scan (height and width) and linearity in both color and black-and-white sets.

The Color-Bar and Dot/Crosshatch generating functions require no external sync connections. All three patterns are RF outputs, factory set to channel 3 (can be set to channel 4). A sound carrier is provided to permit accurate adjustment of the fine-tuning control on the receiver.

The WR-64B features a chroma control helpful in checking color sync lock and color AFC alignment. The color sub-carrier frequency, the horizontal sync-pulse frequency, and the "bar" frequency are all crystal controlled. A shielded output cable is provided with the instrument. Width 13 1/2", Height 10", Depth 7 1/2". Weight only 13 pounds.

POLYLAB SOLID STATE INSTRUMENTS

POLYLAB is a self contained, **SOLID STATE** electronic test center, designed by Schaevitz M.C.D. to fill the electronic requirements of a school or medical lab — a technician's or engineer's test bench. For the first time, a QVM (**SOLID STATE VTVM**), a **SOLID STATE** oscilloscope, a **SOLID STATE** function generator and a **SOLID STATE** sine-square wave oscillator, packaged with a common power supply, for less than the cost of any single **SOLID STATE** component presently available. Each component may be purchased separately with its own, built-in power supply.

Model QEL 100

POLYLAB QVM is a **SOLID STATE** voltmeter which automatically indicates + DC, —DC or AC without switching. High impedance input and four selectable full-scale ranges for 0 to 100 V measurements.

RANGES: 0.1, 2.5, 10, 25, 100 volts DC-PEAK-RMS
ACCURACY: $\pm 3\%$ of full scale nominal
INPUT IMPEDANCE: 10 megohms

Model QVM 101

POLYLAB 3" OSCILLOSCOPE is a **SOLID STATE** DC oscilloscope for both AC and DC measurements, with identical vertical and horizontal amplifiers for all scope applications to 100 KC. Internal repetitive sweeps with excellent linearity and intensity modulation. Extended range when used with Polylab Function Generator, QFG 101, below.

VERTICAL or HORIZONTAL

Bandpass: DC — 100 KHz or 10 Hz — 100 KHz

Sensitivity: 40 mv/div. to 4 v/div.

Centering Range: 2 diameters

Phase Linearity: V to H $\pm 3^\circ$ to 100 KC

SWEEP

10 Hz to 10 KHz in 3 ranges

SYNC:

+ int, + ext or + line

Sensitivity: 600 mv to sync

INTENSITY MODULATION

Sensitivity: 800 mv

Bandpass: 30 Hz — 20 KHz

Polarity: either (selectable)

Model QOS 101

POLYLAB FUNCTION GENERATOR, a **SOLID STATE**, multi-wave form output generator, covers sub-sonic frequencies. Sine, square and triangular outputs cover from 0.1 to 10 seconds. Sweep (sawtooth) output from 0.05 to 5 seconds. All outputs are synchronous.

SINE WAVE OUTPUT: 0-1 volt p-p

SQUARE WAVE OUTPUT: 0-1 volt p-p

TRIANGULAR WAVE OUTPUT: 0-1 volt p-p

RANGE: .1 — 10 Hz in four ranges

SWEEP (sawtooth): 0-1 volt p-p (sweep frequency is $\frac{1}{2}$ signal frequency)

RANGE: 0.05 — 5 Hz in four ranges

Model QFG 101

POLYLAB SINE-SQUARE WAVE GENERATOR is a precision, **SOLID STATE** audio generator with a choice of either sine wave or square wave output. It features a clearly readable dial with range selection and variable output.

RANGE: 20 Hz — 20 KHz in three ranges

SINE WAVE OUTPUT: 0-1 volt p-p

SQUARE WAVE OUTPUT: 0-1 volt p-p

MODEL 550 SERIES
(Rimless Round)
(metal-case)

• **SHURITE** makes attractive, rugged, dependable instruments with accuracy well within $\pm 5\%$, and the ability to duplicate readings. DC meters are polarized-vane solenoid type (moving-magnet or bridge-type construction where indicated): AC meters are double-vane repulsion type with jeweled bearing. The jewel construction costs more to build, but it pays off in continuing accuracy during a longer useful life. Models 550 and 950 fit 2-5/32" hole; Model 850 fits 2-5/32" to 2-1/32" hole. All are guaranteed.

*** **NEW PRODUCTS**—More sensitive meters without sacrifice of ruggedness, include: *A) three 0-500 DC Microammeters with 1000 ohms int. res.; *B) a 0-1 DC Milliammeter, Stock No. 8334, 800 ohms int. res., with Bridge-Type design to minimize effect of external magnetic forces; and *C) a Field Strength Meter, Stock No. 89032. Not cataloged but produced in quantity at extra cost are expanded scale meters, such as 10-12.5 DC Volts, accuracy $\pm .125$ Volt. A handy new Cold Zone Tester is announced on the next page.

FEATURES

GUARANTEE: Meters are guaranteed to users against defective workmanship and material, and will be repaired or replaced if sent to the factory postpaid with 50¢ handling charge within one year after purchase . . . **ALL METAL DIALS**—age and moisture resistant, lithographed in black on white for high visibility . . . **STURDY DESIGN**—with husky coil frames designed to prevent breakage, rigidly mounted in cases with anti-turning square head studs . . . **VISCOSITY DAMPING**—careful application of new silicone compound on bearing surfaces damps pointer overtravel . . . **WIDE SELECTION**—Shurite offers the broadest line of standard meters in the economy-priced field. Distributor stocks are backed by an extensive factory inventory.

CLEAR PLASTIC INSTRUMENTS

. . . The 850 snap-on front of crystal-clear high temperature polystyrene 2-17/32" wide by 2-5/16" high, admits light from all sides and accentuates the appearance of the dial which has the longest scale arc in its field. The case back is black, but of similar high-temperature, high-impact material.

GOOF-PROOF VOM 260-5P

FOR RANGES: SEE 260 VOM ABOVE

This Simpson Instrument has built-in meter protection approaching 100% which virtually makes this VOM GOOF-PROOF. The 260-5P will be of particular value in situations where the instrument may be used by inexperienced people; students, apprentices, and employees. Technicians, too, will find the instrument ideal for exploring unfamiliar equipment, especially when lack of a schematic diagram poses the hazard of encountering unexpected high voltages when making tests.

Combined protection not found in any other VOM.

1. Reset button pops out to indicate overload.
2. You cannot reset circuits while overload is present.
3. Protective circuit does not require massive overloads which can cause hidden damage to the instrument.
4. All ranges are protected except those not feasible in a portable instrument — 10 and 5000 volts DC and AC; 10 Amps DC.

The 260-5P has the same ranges and takes the same accessories as the Simpson 260-5VOM.

Complete with test leads 7500 and operator's manual.

NEW! Voltage-Current Recorder

MULTICORDER®

FEATURES:

- A permanent record of range and measured value.
- Inkless recording via fast sequential impressions on pressure sensitive strip chart paper (no pen and ink maintenance problems).
- A high torque meter movement, with a shock-proof taut band suspension moving coil system.

SIMPSON MULTICORDER Model 604 contains a unique range marking system that indicates the range being used as the value is being recorded. Compact, rugged design, easy-to-operate and accurate, the Multicorder is an indicating instrument with a wide band of ranges and functions for measurements that eliminates the need for a separate recorder for each of the functions and ranges. You get visual readout in addition to the recording action that offers three chart speeds: 1 1/3"/12" per hour. This Simpson Multicorder is the only multi-function recorder available for less than \$200.00.

Simpson VU meters meet all the Electrical and Ballistics specifications established by Bell Laboratories and American Standards Association as required by broadcasting, communication and sound engineers. They are available with either type A or B scales. Type A scale stresses the level in VU for monitoring wire lines. Type B scale stresses per cent use of transmitter output and is the standard for broadcast service.

CONTACTLESS METER RELAYS—Self-Contained, 3 1/2"

RUGGED SEAL CONSTRUCTION

Set points are adjusted thru external, front-adjusted gear drive. Set point is indicated by separate lance pointers. Sensing is accomplished thru an infinite life lamp and photoconductors. A solid state switching circuit and D.P.D.T. slave relay are provided (internally)

for each control point. Slave relays will switch 10 amperes @ 115 volts A.C.

ELECTRICAL SPECIFICATIONS

Calibration Accuracy: $\pm 2\%$ of full scale.

Control Point Adjustment: Control points are externally adjustable over 95% of the scale arc. Control point indication is within 2% of actual switching.

Control Point Differential: Difference between "on" and "off" is within .5% of full scale.

Power Requirements: 115 Volts A.C.; 50-500 CPS.

Output: D.P.D.T. relay contacts for each control point. Contacts rated @ 10 amperes, 115 volts A.C. resistive.

Meter Indication: Continuous, unaffected control point setting.

Control Circuitry: Fail-safe. Both slave relays "open" in event of power failure.

4 1/2" METER RELAY—FRONT ADJUSTABLE—MODEL 29XA

General: Model 29XA Relays are of the D'Arsonval Type. Externally adjusted limit setting contacts are non-locking and intended for circuits with external locking provisions or for light duty non-locking applications.

Calibration: Accuracies $\pm 2\%$ of full scale.

Contacts: Gold Alloy. For use @ 15 volts DC @ 10 milliamperes maximum on resistive or diode protected inductive loads.

Contact Adjustment: Contacts are externally adjustable over 95% of 100° scale arc, and within 5° of each other. The pointer will indicate the contact make position within 2° of actual contact intercept.

Contact Differential: Normally, contacts will close within 2% of full scale value and break within 10% of full scale value.

Insulation: Breakdown 300 volts AC from Relay contacts to meter circuit. 3 KV AC from Relay terminals to mounting panel. (All Tests at 50 cycles.)

SEGMENTAL VOLTMETERS — "Rugged Seal" Construction

The significant portion of the overall voltage scale of these meters is expanded to occupy the full scale length. In addition to the stock expansions and accuracies shown, special segmental voltmeters can be built on order.

Meters are completely sealed and commercially ruggedized; metal cased and shielded; and are not affected by mounting on steel panels. Movement is external magnet type shielded by the metal case.

Accuracies shown are in percent of center scale value.

All of these AC segmental voltmeters are the RMS sensing type which are preferred when working with distorted waveforms.

TO-6 TEL-OHMIKE® CAPACITOR ANALYZER

The TO-6 TEL-OHMIKE capacitor analyzer is a must for checking all capacitors. It is a moderately priced instrument with laboratory quality and accuracy—the highest accuracy of any instrument of its type available to the service trade!

- **CAPACITANCE BRIDGE** measures up to 2000 μF . Five overlapping ranges include exclusive 1 pF to 100 pF range. Special shielded transformer for bridge voltage. Extremely low AC voltage; 1.35 volts for electrolytic capacitors, 2.85 for all others, permits safe testing of all low voltage capacitors.
- **INSULATION RESISTANCE** of papers, ceramics and mica directly read on large meter. No guessing with neon lamps. Dual range—to 10KM Ω @ 30V for low voltage units . . . to 50KM Ω @ 150V for higher voltage components. Fast charge feature speeds testing of high capacitance units.

- **LEAKAGE CURRENT** of electrolytics measured directly on meter. Four ranges; .06, .6, 6, and 60mA. Three ranges of voltage (continuously variable within each range) permit testing capacitors at exact rated voltage up to 600 volts.
- **POWER FACTOR** of electrolytics, up to 50% measured on Wien Bridge.
- **METER PROTECTOR** of solid-state design allows safe accidental over-loads without burn-outs.
- **MAGIC-EYE TUBE** simplifies bridge balancing for capacitance and power factor measurements. High gain amplifier provides greatly improved sensitivity.
- **PUSH-BUTTONS** color-keyed for instant range selection.
- **MODERN CASE:** Silver-grey hammertone finish, panel charcoal grey with highly contrasting white designations. Measures 8 7/8" high, 14 1/2" wide, 6 1/8" deep. Weight only 10 pounds.

TCA-1 TRANSFARAD®

The Transfarad is specifically designed to safely test all low-voltage, low-leakage aluminum, tantalum, film, paper, and ceramic capacitors used in transistorized circuits. A must for modern industrial laboratories and electronic service shops.

SAFELY TESTS TRANSISTOR CIRCUIT CAPACITORS INCLUDING TANTALUM TYPES

- The only analyzer which gives the complete story on tantalum and other low leakage current capacitors.
- **CAPACITANCE BRIDGE** measures 1 μF to 2000 μF in five overlapping ranges. Only 0.5 volt is applied to the bridge from a continuously adjustable power supply. The voltage across the capacitor is less than this applied voltage, the amplitude depending on the capacitance being measured. No possibility of overheating or deforming any low voltage capacitor during measurements.

- **INSULATION RESISTANCE** directly read from 50 megohms to 20,000 megohms. Only 25v d-c is applied, permitting measurements on low voltage ceramic, and film capacitors. IR of ceramics rated below 25v may be calculated from leakage current measurement at exact rated voltage.
- **LEAKAGE CURRENT** measured directly on meter at exact rated d-c voltage of capacitor. Sensitive circuit makes full scale measurements from 0.6 μA to 600 μA in seven ranges.
- **POWER FACTOR** measured by Wien bridge from 0 to 50 per cent.
- **MAGIC EYE** null detector in high-gain amplifier has sensitivity control permitting accurate measurement of small capacitors.
- **SHORT-TIME STABILITY** is assured by dual regulation of the power supply. Specially processed etched circuits and complete encapsulation of the critical bridge-null amplifier insure long-time stability.
- **BINDING POSTS** are shielded against strays, assuring greater accuracy during low capacitance measurements.
- **FOR SAFETY** the capacitor under test is automatically discharged after testing. Three wire line cord grounds instrument case.
- **OPERATING PROCEDURES** are clearly shown on convenient pull-out slide.

CHECKS LINE LOADS WITH MODEL 310 OR 310-C

(Also can be used with Models 630, 630-A, 630-NA, 631, 630-PL, 630-APL, 630-M, 630-NS, 630-PLK, 630-L by means of 611 leads.)

Checks all line loads instantly, accurately, safely—without breaking the circuit or interrupting work. Easy range switching. Model 10 Clamp-On Adapter AC Ammeter ranges: 0-6-12-30-60-120-300. Clips around single wire to read A.C.

Amperes direct. Used with Adapter 101 to divide instantly two-conductor cords. A lever securely locks the Model 10 to Model 310 when used in combination. Model 10 can be left attached to Model 310 when the latter tester is used as an AC-DC V-O-M only. The only change is to remove the lead plug from the Model 310 V-O-M jack and insert it in the jack provided in the Model 10 housing.

Case black molded plastic with engraved white markings. **\$17.00**

No. 611 LEADS

In addition to use with the Model 310, the No. 10 Adapter also can be used as a Clamp-On Ammeter with any Volt-Ohm-Milliammeter having a 3 AC Volt scale at 5,000 Ohms per Volt or above, such as Triplet Models 630, 630-A, 630-

NA, 630-PL, 630-APL, 630-NS, 630-M, 630-PLK, 630-L, 631, etc. (see illustration). This is done by means of a long lead attachment (No. 611) making possible easy readings in difficult locations. **\$2.50**

No. 311 LEADS

The Model 10 can be separated from the Model 310 (in the same way as above) by using No. 311 lead attach-

ment. This permits readings in difficult locations. **\$2.50**

MINIATURE EDGEWISE PANEL INSTRUMENTS

If space on your panel is at a premium here is a miniature meter that will fit into even the most restricted area—yet give you the readability, performance and reliability you expect from the conventional 2¼" sizes.

Weighing only four ounces this meter also is of value to the user who has a weight limitation factor on his hands.

Accuracy—DC 2% of full scale; AC Rectifier type 3% of full scale.

Self-Shielded Bar-Ring Magnet—Not affected by magnetic panels. High torque, exceedingly rugged and accurate.

Mounting—Horizontal, zero at left and barrel down is standard.

Vertical mounting or other special adaptations in quantity orders.

Panel Hole Required—Only ⅞" x 1⅞".

...features

LOW COST. Outstanding performance is provided in a low cost instrument providing digital readout.

ACCURACY. Warranted accuracy is maintained for all internal contributing factors and the listed external conditions.

(1) Ambient Temperature—60° to 115° F.
(2) Power Source—105 to 125 V—50 to 60 CPS.

READING AMBIGUITY. There is no ambiguity or reading (even for small changes) and no allowance need be made. Bi-directional voltage variations are followed without distracting backtracking.

RESOLUTION AND REPEATABILITY. The instrument can be easily read and is sensitive to small voltage changes. For short term observation, under stabilized ambient conditions, unit will repeat and is easily read to .05% or less. Thus, for many applications, the instrument can be used to a comparative accuracy of .05% full scale.

CALIBRATION EASE. High input impedance permits direct calibration with Standard Cells. Under normal usage, recalibration is required only at 6 month intervals.

RELIABILITY. High reliability is achieved by a silicon transistor amplifier and the absence of stepping switches and relays. Normal overloads or incorrect polarity will not damage instrument.

READING SPEED. Instrument comes to reading balance quickly and without annoying creep. Average reading time is approximately 2 seconds.

INPUT. A 3-terminal color coded input group is furnished whereby choice is provided for grounded or floating input. A jumper link is furnished so that either negative or positive side of the input can be grounded.

DECIMAL POINT. Decimal points are illuminated by a single, long-life easy-to-replace bulb. The decimal point shifts with range selector.

OTHER USES. By use of compatible transducers, the DigiTec can be used to display readings of current, pressure, speed, position, flow, angle or any parameter. Current adaptors are available to provide readings of from .1 μ A to 2 AMP.

READING RETENTION. A jack is located on the rear of the case to permit holding of a displayed voltage by means of an external switch. Suitable switches complete with cord and plug are available as optional accessories.

CARRYING HANDLE. For the portable models, the convenient carrying handle also serves to set the viewing angle for optimum readability.

Certificate of Accuracy furnished with each instrument (traceable to NBS).

WESTON INSTRUMENTS, INC.

MODEL 1900 PANEL INSTRUMENT SERIES

GENERAL

The 1900 Series is an integrated line of a-c and d-c panel instruments, providing a carefully selected choice of sizes, case styles, accuracies, pointers, scales and ranges. Particular attention has been paid to designing instruments that will present an overall appearance of harmony, even when random sizes are mounted side by side. Mounting bezels provide three types of mounting—recess, flush and conventional.

One of the many features of this new Weston series is the method of construction which provides quick interchangeability of fronts and easy access for adjustment or service, if ever required. From their spring-backed jewels to their unique fastening clips, the 1900 Series incorporate the fine workmanship and quality that has always been associated with Weston.

THIN LINE PANEL METER MODEL 111

Completely Flat — Can Be Stacked Side-by-Side

New Self-Shielded Mechanism

Saves Panel Space

Designed to Meet ASA C39.1 Specifications

The Model 111 utilizes a completely new mechanism design. This is the only edgewise instrument incorporating a CORMAG mechanism design for shielding purposes. The magnet is inside the moving coil as in all Weston CORMAG® designs and the resulting inherent shielding allows mounting on magnetic or non-magnetic panels without need for adjustment, as well as the ability to "stack" meters side-by-side without any interaction. The mechanism also has a shock absorption jewel arrangement to assure long life.

ALL DIMENSIONS ARE APPROXIMATE

SPECIFICATIONS

Accuracy: 2% of full scale value for DC
3% of full scale value for AC
Rectifier Type

Scale Length: 1.25 inches

Mounting: Red Lance Type

Mounting: New self shielded thin line CORMAG mechanism. Shock mounted jewel arrangement.

Ranges: Voltage: 50 mv minimum
300 volts maximum

THIN LINE PANEL METERS

MODEL 121 EDGEWISE

- Completely Flat—Can Be Stacked Side-by-Side
- Parallax Eliminated—In-Line Pointer and Scale
- New Self-Shielded Mechanism
- Saves Panel Space
- Illumination Available (Self-Contained)
- Designed to Meet ASA C39.1 Specifications
- Front Mounted Zero Corrector

The Model 121 is basically a 2½ inch flat edgewise meter offering many benefits not generally offered in this type of meter. To eliminate parallax normally associated with edgewise meters an "in-line" scale is standard; a red pointer increases readability. For those requiring lighting, self-contained illumination is available as an optional feature. The bulbs are removable while the meters are mounted in the panel—even when "stacked" side-by-side. • The Model 121 utilizes a completely new mechanism design. This is the only edgewise instrument incorporating a true flat CORMAG mechanism design for shielding purposes. The magnet is inside the moving coil as in all Weston Cormag designs and the resulting inherent shielding allows mounting on magnetic or non-magnetic panels without need for adjustment, as well as the ability to "stack" meters side-by-side without any interaction. The mechanism also has a shock absorption jewel arrangement to assure long life.

SPECIFICATIONS

Accuracy: 2% of full scale value for DC
3% of full scale value for AC rectifier Type

Scale Length: 1.9 inches; Anti-parallax in-line scale

Pointer: Red Lance Type

Movement: New self shielded thin line Cormag mechanism. Shock mounted jewel arrangement.

Ranges: Voltage 50 mv minimum 500 volts maximum self-contained
Current: 50 ua minimum 20 amps maximum self-contained

Mounting: Meter can be mounted either horizontally or vertically. Order proper meter from price list for the required type mounting. Mounting clips fasten to meter behind panel—no screws show on front of panel. For "stacking" thru holes are provided so stack can be bolted together.

Illumination: Two G.E. 328 lamps are used. Recommended operating voltage—5 volts (less than 200 ma per bulb). Expected life greater than 5,000 hours.

Dielectric: 2000 volts RMS

The basic mechanism is of the standard Weston CORMAG design which offers inherent self-shielding. This means that these units will be unaffected by panel material, normal magnetic fields created by current carrying conductors and can be mounted side-by-side with no loss of accuracy.

SPECIAL FEATURE: Filters may be placed behind the scale so that the pointer will change color at a fixed point. Up to 10 colors (plus a white pointer area) can be provided. Standard colors are red, green or amber.

ALL DIMENSIONS ARE APPROXIMATE.

No mounting screws are visible from front of the panel—two clips behind the panel securely lock the meter in place.

SPECIFICATIONS

Accuracy: 1% of full scale value*
2% of full scale value for AC Rectifier

Scale Length: 4 1/2 inches
Scale Color: White figures and divisions on black background.
Pointer: White, triangular shape. Colored filters available.

Movement: Self-shielding CORMAG mechanism.

Ranges: 50 Microamperes through 50 Amperes D-C self-contained; 50 Millivolts through 50 Volts D-C self-contained/Rectifier and thermocouple types available.
Mounting: Horizontal or Vertical. Specify mounting position when ordering. Most ranges stocked for horizontal mounting.
Mounting screws are visible from front of the panel—two clips behind the panel securely lock the meter in place.
Example: G.E. No. 5 operated at 5 Volts, 2.86 amperes, A-C or D-C, 10,000 hours minimum projected life.

MODEL 1209 SERIES (Projected Moving Scale Meter)

...8" OF SCALE IN A 2½" FRONT

- RETAINS ALL THE ADVANTAGES OF AN 8-INCH METER
- ELIMINATES PARALLAX
- 1% ACCURACY (½% OPTIONAL)
- SELF-ILLUMINATED SCALE
- REQUIRES ONLY 7 SQUARE INCHES PANEL SPACE
- SELF-SHIELDED MECHANISM
- SELF-CONTAINED

Standard meters use black background scales with white figures. White background scales available.

APPLICATIONS

For the first time, designers can standardize on one meter which fills the complete range of requirements: small size • long scale length • accuracy • self illumination • versatility in styling (proprietary bezels available at a normal cost). With Weston's new PMS instruments, equipment dimensions can now be based on optimum space requirements rather than on meter size.

HOW THE PMS MODEL 1209 WORKS

A simple optical system projects a moving scale onto a coated window. The scale is rotated by a self-shielded Weston Cormag mechanism. Proven design and reliability. Pivot roll is eliminated in PMS panel meters, because the mechanical axis is vertical.

Highest QPL sensitivities.

This completely new 2521/2531 Series of Weston ruggedized instruments is built to "take-it". New design concepts, new materials insure dependable, accurate service under extremes of shock, vibration, temperature, humidity and general abuse. Simplified design allows moderate prices.

Designed to comply with MIL-M-10304B, they are made from non-brittle materials...all components are secured with demountable and reusable fasteners...scale plate, mechanism and shatter-proof mounting base are easily removed as a complete sub-assembly for quick repair. The 2521/2531 Series is another example of famous Weston quality, and is keynoted by the fact that even 20 microampere sensitivities are ruggedized. For applications in the vicinity of strong rf fields, these meters can be completely shielded by specifying conductive glass windows.

GENERAL

2930 Series comprises a group of AC and DC panel meters mounted in a sloped front mounting base constructed of high impact resistant plastic. These instruments are primarily designed for "bench testing" requirements both in educational and industrial laboratories. They use quality components throughout — the indicating instrument is one of the well known Weston 1900 Series of panel meters which have a proven history of accuracy and reliability.

The ranges listed are stocked by authorized Weston Distributors and special ranges can be obtained through local Weston Modification Centers. The cataloged meters are supplied with standard scales and lance type points except the null indicators, which have a knife edge point and mirror dot at null.

A colored plastic insert is supplied on all units — yellow denotes a DC unit and red an AC unit.

D-C MICROAMMETERS

Model 622 microammeters, low resistance type, are designed to function on the lowest amount of energy consistent with reasonable performance. They should be used in circuits when but little energy may be abstracted by the instrument such as in the output of vacuum thermocouples.

High resistance microammeters should be used wherever circuit conditions will permit. They will stand more severe service and in general are more rapid in indication than low resistance instruments.

Model 622 Thermo Instruments

Accuracy within $\frac{1}{2}$ of 1% on a-c of frequencies stated and within 1% on d-c at 25°C.; within 1% on a-c of frequency stated and 1.5% on d-c from 20° to 30°C — Scale length 1" (155 mm).

Dimensions { 8.75 x 7.75 x 4.06" } Approx. Weight { 8.5 lbs. 222 x 197 x 103 mm } 4 kgs.

Thermocouple Type — Molded Bakelite Case

Model 622 thermo instruments are basically ultra-sensitive temperature compensated d-c millivoltmeters calibrated with replaceable thermoelements.

Plug-in vacuum type elements, in which the heater and couple are contained in an evacuated glass bulb, are used in thermo milliammeters and thermo voltmeters. The overload capacity of these thermoelements as used in Model 622 is excep-

tionally high, at least 2 times normal for all ranges.

External compensated type elements are used for the thermo ammeters. Temperature compensation is obtained through use of compensating strips which maintain the cold ends of the thermocouples at the temperature of the heater blocks. Overload rating is 1.5 times normal.

THERMO AMMETERS

External Thermoelement Type

Supplied with one Type C thermoelement of range desired. 5 foot shielded leads for connecting thermocouple to instrument. Multi-range combinations obtained by use of additional thermoelements of ranges desired. Instrument scales are directly calibrated to original thermoelements, or average data where additional couples are supplied for multi-range combinations. Can be used on d-c and a-c ranges below 20 amperes; on a-c only for higher ranges. Frequency ranges less than $\frac{1}{2}$ of 1% up to 35 megacycles and less than 2% up to 65 megacycles.

MARK II ANALYZER

The new thin-line Mark II is a highly sensitive and extremely rugged volt-ohm-milliammeter designed for a wide range of accurate test measurements in the electronic field.

Famous CORMAG® mechanism protects the instrument against false readings due to magnetic disturbances. Electrostatic shielding assures

accurate measurements at high d-c voltages. Fuses in the low ohmmeter circuits prevent burnout if voltages are mistakenly applied. Interchangeable parts eliminate all need for parts selection in the event replacements are ever necessary. The breakproof case will withstand dropping and thus eliminate the major source of repair and maintenance costs.

A-C OPERATION — Standard SLO-SYN Synchronous/Stepping Motors are permanent magnet a-c motors having extremely rapid starting, stopping and reversing characteristics and a slow basic shaft speed of 72 rpm synchronous with a line frequency of 60 cycles. Three-lead types need only a single-pole, three-position switch for complete forward, reverse and "off" control. No excessive inrush current when energized because starting and operating current are nearly identical. Can be completely stalled without overheating and with no harmful effects on components. Starts or stops in less than 5° of shaft rotation; no need for mechanical or electrical braking. When used with an auxiliary high speed motor, the SLO-SYN motor can remain coupled to the load and safely overdriven. Phase shifting resistor and capacitor must be used when operating from a single-phase source but not from two-phase. All standard motors are rated for continuous duty at maximum ambient temperature of 40°C. Types

SS150 and SS152 use Class A insulation; all others have Class B.

D-C STEPPING — When used for phase-switched d-c stepping, the motors can be connected to provide either 100 or 200 steps per revolution. Accuracy of the steps is $\pm .09^\circ$ non-cumulative. Three-lead types require a center-tapped d-c supply and single-pole, double-throw switching; four-lead types require a single-ended power supply and single pole, double-throw switching. Bifilar motors can also be used with transistorized switching circuits. With a suitable control potentiometer instead of switches, a SLO-SYN motor can be made to rotate steplessly, permitting extremely accurate positioning. All motors have lubricated-for-life bearings.

Types TS50 and TS52 are similar to standard models but operate at synchronous speeds of 200 rpm and take 36 or 72 steps per revolution when used for d-c stepping.

TYPES LS50 & LS52

24 RPM

When used as an a-c motor, a type LS50 or LS52 motor has a shaft speed of 24 rpm synchronous with a line frequency of 60 cycles. When used for d-c stepping the motors take 600 incremental steps to make one shaft revolution. These 0.6° steps are accurate within $\pm 0.03^\circ$ noncumulative. Ratings for stepping applications are 30 volts d-c, 0.25 amp. per winding for type LS50; 60 volts d-c, 0.15 amp. per winding for type LS52 and 3 volts d-c, 4.0 amp. per winding for type LS50-1001. Ratings for a-c applications shown in chart.

TYPE HS25

PRECISION STEPPING

For phase-switched d-c stepping, types HS25 and HS50 make 200 precise steps per shaft revolution. Each 1.8° step is accurate within $\pm 3\%$ (0.6°) noncumulative. May be operated at speeds greater than 500 steps per second if accelerating and decelerating circuits are used. With proper circuitry, the motors may be operated at speeds of 1000 steps per second or higher without missing any steps. Ratings for d-c stepping are 5.4 volts d-c, 1.3 amp. per winding for type HS25 and 3 volts d-c, 4 amp. per winding for type HS50.

BIFILAR

Used for d-c stepping where use of push-pull circuitry and center-tapped power supply is not possible or where increased torque at high stepping speeds is required.

SPECIAL ENVIRONMENT

High Vacuum types for vacuums to 10^{-6} Torr; High Temperature types for temperatures to 130°C ; High Radiation types withstand dosage of 3,000 megarads. All available from 50 to 1800 oz-in; High Vacuum 25 oz-in also.

EL10H Retro-Reflective Sensing Head

Lamp and sensing cell are in the same housing. Light projected through the lens strikes a retro-reflective surface, and returns through the same lens to the sensing cell. The retro-reflective surface may be tilted up to 15° from perpendicular to the light path.

Distances on the charts are based on use of No. P380 3" diameter Retro-Reflector. Retro-reflective paint, etc. may be used—the reflective quality of the target affects the operating distance.

Gasket-sealed, cast-aluminum case, with 6-ft. multi-conductor factory-connected cable. Flange at front and bottom have four .201" mount holes on .62 x 2.87 centers. Width, including flanges, 3.43"; height, 3.59".

Miniature Photo Reflective Heads and 800B Transistorized Control

E8LP11G Scanner Head

Dotted line represents path of reflection—not the light beam

reflective surface

E8LP11G Scanner Head for specular reflective control. Responds to ordinary reflective surface and light beam must be directed perpendicular to the reflective surface for light to bounce back and strike the light sensing cell.

E8S11G Scanner Head

Dotted line represents path of reflection—not the light beam

retro-reflective surface

E8S11G Coaxial Scanner responds to retro-reflective surface (tape, chalk, ink, paint, etc.). Light beam need not be perpendicular to the surface; with an angle of incidence up to 45° and more light bounces straight back to the source.

E8LP11G Miniature Scanner Head

For high speed scanning service in minimum space. E8LP11G Scanner Head combines the fast acting cadmium selenide cell and the light source lamp in a single miniature housing (approximately 1/8 inch in all three dimensions plus 3/8" male pipe thread connection. See dimensional diagram below.)

The light sensing element is a fast response, cadmium selenide cell. The lamp has a built-in lens. An infrared filter helps protect against ambient light. The lamp rating is 2.5 volts at .5 amperes-life expectancy up to 75,000 hours depending on operating voltage.

Unique Design—Rugged Construction

- Housing (1) is precision machined from bar aluminum for ruggedness and stability. In production quantities can be furnished in specified colors.
- Removing a ring nut (2) releases capsule (3) containing cadmium selenide cell and light source lamp.
- Removing two screws from capsule (not visible in photo) permits replacement of cell and lamp.
- Polarized design assures correct position on four spring loaded contacts (4) when capsule is inserted in the head.
- 6-foot cable is factory-connected to terminals in housing.
- Cable, terminal connections and contact base are encapsulated in the housing with epoxy resin.

Dimensions, Diagram 181

For use with retro-reflective tape or other retro-reflective material. Is used with a retro-reflective mirror when it acts as a sort of limit switch or for detecting or identifying objects with retro-reflective markings, code marks, labels, etc.

The light beam does not need to be perpendicular to the retro-reflective surface; beams at angles up to 15° and more (depending on condition) bounce straight back to the cell.

Impak-Switch Die Protection

In the above diagram each piece properly ejected from the die strikes the impact sensing plate which actuates the Impak Control and the Control re-cycles the press control for another stroke.

The impact of falling parts against the sensing plate of the Impak-Pick-up activates the Impak Switch. Objects may be of practically any reasonably uniform size, ranging from ball bearings to heavy stampings, etc.

In other die protection applications the Impak Control has time delay set to barely exceed complete stroke cycle of the press. Each proper ejected piece re-cycles the Impak Control before the timing period expires.

MINIATURE NUMERIC READOUT INDICATORS

NEW low-priced miniature numeric readout indicators feature compact size, large digital displays. Principle of operation relies on an engraved lucite plate which is edge lighted by an incandescent lamp. Figures are marked as a series of white dots and are clearly displayed. 6 or 14 volt models.

- Type 2181 or 2182 lamps are securely soldered in place to eliminate improper contact problems.
- Extremely long life lamps used for virtually trouble free operation. 30,000 to 50,000 hours life.
- Lamps physically mounted in odd and even sectors to simplify design & wiring of decimal or binary systems.

HOT-STAMPED OR ENGRAVED LEGENDS

Short and Long Cylindrical Datacaps can be hot-stamped with one to three digits of standard size, as follows:

- 1 DIGIT, $1\frac{3}{64}$ " high (18 pt. type)
- 2 DIGITS, $1\frac{1}{64}$ " high (14 pt. type)
- 3 DIGITS, $\frac{3}{64}$ " high (12 pt. type)

These standard sizes of Legends will be provided in a uniform manner per order — i.e., the size of type will be determined by the longest legend in each individual order. Standard—BLACK. White, red, green or blue hot-stamping can be supplied to order. Also available — colored legends on black or grey lenses.

Meet or exceed environmental and operational requirements of MIL-L-6723 and MIL-L-3661.

RUGGED CONSTRUCTION

Lamp, socket, and all connections are completely insulated from the bushing and panel to which it is attached. The use of phenolic material for military specification grade assures permanent isolation from ground. These assemblies are solidly made to withstand usual vibration and corrosion resistance tests.

STOVEPIPE or
ROTATABLE
CYLINDRICAL LENS

This omnidirectional stovepipe lens is molded of high heat plastic to a special design. About two-thirds of the lens is "fluted," and the remaining portion is smooth. This produces clear light framed by a sparkling "halo" when viewed from the front. Softer light is afforded along the "fluted" sides. The NE-2D or NE-2J Neon Lamp enters high into the lens for best effectiveness. Whether used on the front insertion or the back insertion assembly, the stovepipe or cylindrical lens cap is readily removable from the front of the panel, thus making the lamp accessible for easy replacement.

For the T-3¼ NEON GLOW LAMP FOR VOLTAGES UP TO 250

For operation on 105-125V. or 210-250V. . . The required resistor is an integral part of the unit — BUILT IN. Assemblies conform to MIL-L-3661.

BUILT-IN RESISTOR VALUES (in ohms) for the NE-51 TYPE GLOW LAMPS

NE-51H (High Brightness)		NE-51 (Standard Brightness)	
Circuit volts applied to terminals 110-125 AC 210-250 AC-DC		Circuit volts applied to terminals 105-125 AC-DC	
BRIGHT LIGHT	22,000	BRIGHT LIGHT	56,000
LONG LAMP LIFE	33,000	LONG LAMP LIFE	100,000

■ Standard values of patented built-in resistors.

PROPER CHOICE OF LAMP AND BUILT-IN RESISTOR VALUES: The NE-51 glow lamp types are shown with resistor table. Lamps are the standard brightness NE-51 and the high brightness NE-51H. The latter may be operated at about three times the level of current that may be applied to the standard lamp and it will produce more than 8 times as much

External resistors will be furnished which will permit use of these lights on voltages higher than 250 volts.

In these Oil-Tight Indicator Lights, a high degree of resistance to shock and vibration is achieved by the use of the rugged Neon lamps on 120 and 240 V; and by choosing low voltage Incandescent lamps with short filaments, such as No. 44 or No. 1866 for circuits powered by transformers stepping down to 6.3 V.

Exclusive Features: Assemblies for use with NE-51 Neon Glow Lamps have "built-in" resistors—an exclusive Dialco feature (U.S. Pat. No. 2,421,321). Options include: binding screw, soldering or quick connect terminals. 7 lens colors are available; see bottom of page 965 for method of specifying color.

INDUSTRIAL DEVICES, Inc.

OMNI-GLOW PILOT LIGHT

For use on instrument panels, appliances, switchboards, all electrical and electronic apparatus. OMNI-GLOW will last in excess of 10,000 to 25,000 hours of operating life.

With built-in glow lamp and current limiting resistor, all mechanical spring contacts are eliminated, providing a cost-saving, rugged unit relatively free from failure due to vibration or shock.

Easy mounting—only a $\frac{1}{2}$ " hole required for any panel thickness. Instant fastening—speed nut assures permanent shock and vibration-proof attachment.

Drawing less than 1/10 watt at 115 volts, long life, high reliability operation is provided over the 75-150 volt range; can also be used at higher voltage with decreased life.

Nylon body and acrylic lens assembly is $1\frac{3}{4}$ " long overall. Lens extends $\frac{1}{2}$ " in front of panel. Black plastic (105°C) leads are $4\frac{1}{2}$ " long, stripped and tinned $\frac{1}{2}$ ".

Four standard models have red (Model #1010A1), clear (Model #1010A2), amber (Model #1010A3), or white translucent (Model #1010A4) lenses.

Furnished complete with lamp and speed nut. OMNI-GLOW is UL approved—CSA Approval No. 13346.

SAFE-T-KLIP

(U.S. Patent 2,754,490)

New convenience and safety are realized through the use of 100% insulation on these test clips. Tough nylon insulation covers the entire clip, including the nose, without the bulkiness of rubber boots or insulating tape. Danger of short circuit due to clips touching each other or other components is eliminated, and test leads may be changed from one connection to another without cutting the power in the equipment.

Available in pairs (one red, one black) SAFE-T-KLIP incorporates a cadmium plated steel alligator clip and provides shock-proof, short-circuit proof operation in excess of 600 volts. Width of the clips is $\frac{3}{16}$ "; maximum height is $\frac{3}{8}$ ". Six models are available.

REAR-PROJECTION, SINGLE-PLANE, 12-POSITION READOUTS

FEATURES:

- Single-plane presentation for crispness, not visual hash.
- Bold, bright indications for high readability at wide angles, long distances, in brightest light.
- 12 message positions per readout. Colors, polarity, decimal points available.
- No moving parts for unlimited unit life; lamps easily replaceable.
- Low voltage operation.
- No filters, screens, or shades required.

PRINCIPLES OF OPERATION:

Cut-away of IEE Series 10 readout shows basic principles of IEE's patented rear-projection, single-plane operation. Photographic film containing up to 12 individual messages is mounted in front of 12-lamp assembly. As one or more of these lamps is lighted, the corresponding message is projected on the front viewing screen by a set of lenses. Because the presentation is entirely single-plane, only the message being displayed is visible; the other messages are totally invisible.

HIGH VOLTAGE POWER SUPPLIES

PORTABLE HIGH VOLTAGE DC POWER SUPPLIES

One of the most popular power supplies on the market. Completely redesigned for greater ruggedness and convenience of operation. Widely used for powering electronic equipment and for routine breakdown and insulation testing. Output voltage is well filtered D.C. which is adjustable with convenient front panel control. Input is 115 Volt, 60 cycle A.C. Larger 6" precision 1% mirror scale movement available on order. Regulated models offer closely stabilized output voltage regardless of line or load changes.

NOTE: Regulated power supplies are of the radio frequency type (RF) and adjust from approximately 20% to full rated voltage. Regulation is in the order of $\pm 1\%$ over most of the range. These supplies are rated at 100 microamps. Transformer operated unregulated supplies are available in 5 milliampere types and have a range of zero to full voltage output. These are recommended for industrial service applications. When ordering add the proper prefix to the basic model number, for example, RF, or 5 MA, depending on your requirements.

Model	Max. Voltage	RF	5 MA

6025	25 KV	275.00	350.00

OPTIONS: Mirror Scale Higher Accuracy Meter. Recommended for more exact calibration or test purposes. (Illustrated) \$50.00. Additional Built-in Current Meter (both meters are 3 inch size), including automatic meter protector circuit \$50.00.

PACKAGED POWER SUPPLIES AND ZENER REGULATIONS

PACKAGED POWER SUPPLY

ZENER REGULATOR

These new low-cost units make D.C. voltage problems easy. Just wire input and output connections, and the unit is ready to operate. Building block construction provides a basic transformer, a rectifier and filter, and where necessary a regulating device. These three elements bolt together quickly and maintenance is simplified should any of the components fail. Each of the three basic building blocks are mechanically constructed in a molded Dialyl Phthalate shell and encapsulated with epoxy resin.

The output is completely isolated and either post may be grounded or the unit operated as a floating supply. The D.C. voltage is filtered and provides 5% or less ripple. Output may be varied from full rating down to zero by simply inserting a small adjustable transformer in the input. Most units are rated for 5 MA current. Power supplies 7.5 KV and higher have modified mechanical construction from that described above. Input 115 V, 60 cycle.

Use with High Voltage Zener Regulators to obtain 1% line and load regulation.

* If necessary, insert a series resistor to limit zener current to under 5 MA.

Simply connect in parallel* with any high voltage power supply and automatically obtain line and load voltage regulation as well as ripple reduction. Nominal current rating is 0.5 to 1 MA for better than 1% stabilization. Regulation over range of 0 to 5 MA is 3%. Can be wired in series for high voltage service (five 4,000 volt types to regulate a 20,000 volt power supply). Twenty built-in taps included, each provides a regulated voltage to an accuracy of 20%. Ideal for photomultiplier tubes. Use as a high voltage reference in conjunction with regulator amplifier circuitry.

HIGH VOLTAGE POWER SUPPLIES

COMPACT PSL SERIES

PSL SERIES of compact power supplies are designed to operate from the most commonly used line frequencies 50 CPS to 500 CPS. Input voltages 118V, 220V, 230V, and 240V*.

PSL SERIES Power Supplies have the important features:

Input Voltage 0 to rated input voltage* at 50 to 500 CPS.

Output Ratings 0 to 10 milliamperes in accordance with the rating of the power pack.

Ripple 1% RMS or 2.75% peak to peak at rated voltage.

Output Voltage can be varied from 0 to rated voltage and load by means of a variable auto transformer.

Two Output Terminals are isolated from the container, permitting either terminal or both to be operated away from ground.

Ambient Temperature Range is minus 55°C to plus 85°C (with limited ratings).

Mounting Position: Any.

Altitude up to 10,000 feet operating 50,000 feet non-operating.

Design Life 40,000 hours at 35°C and 25,000 hours at 65°C at rated output. Life is 5000 hours at 85°C if the output current is no more than 80% of the rated current. Useful life is generally double the figure given above if an approximately 3% drop in voltage is tolerable.

POWERCON® Class 251 • 00

POWERCON® INVERTERS

POWERCON® inverters feature all new designs and attractive styling to provide the ultimate in inverter power supplies for providing AC power in autos, trucks, aircraft and boats. Units are ideal for operating a wide variety of electronic entertainment devices as well as small appliances and lighting equipment.

The 12TV12 illustrated, has met with enthusiastic acceptance. This model is intended for operation of portable TV sets as well as other household appliances within the rating. Other models in the POWERCON® line feature the same attractive styling as the 12TV12. The combination of attractive design and superior power supply design features makes the POWERCON® Line the outstanding buy in mobile, aircraft and marine power supplies.

Models are available with either square wave or sine wave outputs. Square wave models have stable 110v AC under various loads due to built in capacity and conservative ratings. Intermittent loads will not damage the unit. Intermittent ratings are for loads with 70-100% power factor. Square wave units feature superior filtering and solid mechanical and electrical design to give hash-free output for interference free TV, radio and shortwave reception.

12TV12 illustrates the modern styling of the POWERCON® inverter line.

The sine-wave units have added reactors and capacitors to provide true sine-wave power — indistinguishable from commercial power. These units are recommended for electronic equipment where optimum performance is required. The sine-wave units control output voltage between 110 and 120v AC with up to 15% input variation. Units feature automatic load regulation for heavy or light loads. Sine-Wave units will operate inductive loads as low as 25% power factor without power factor correction as long as the wattage rating is not exceeded and the inrush VA does not exceed the intermittent ratings.

Prices in this MASTER should not be considered as final. INQUIRE ABOUT LATEST PRICES AND DELIVERY.

Trade discounts apply in most cases where LIST PRICES are shown.

Since previous editions of the MASTER are frequently referred to, it is important, when ordering, to mention specifically the edition and page number, also the catalog number of each item. This will avoid possible confusion and delay.

While most distributors maintain a large and varied stock, they do not represent that they stock all manufacturers' products shown in this MASTER catalog.

AC VOLTAGE STABILIZERS

For Electronic and Electric Equipment

General Electric a-c voltage stabilizers are static-magnetic transformer-type products which provide voltage maintained within $\pm 1\%$ variation while input line voltage fluctuates $\pm 15\%$. They are offered in the following variations:

Unfiltered output: output voltage waveform is relatively flat-topped, with harmonic content from 15 to 20%.

Harmonic filtered output: output voltage is filtered to near sinusoidal waveshape, with a maximum of 3% harmonic content.

Enclosed construction: completely metal enclosed for safe external mounting.

Open construction: for installation within electronic or electric equipment.

SINGLE PHASE—Magnetic-capacitor circuitry is frequency sensitive. Stabilizers designed for one frequency are not suitable for use on another.

THREE PHASE—Standard single-phase a-c voltage stabilizers can be connected for 3-phase, 4-wire loads with input connected delta. However, single-phase models cannot be connected for 3-phase, 3-wire loads: select from 3-phase delta-delta models.

GENERAL ELECTRIC

STABILTRON* AC VOLTAGE STABILIZERS

For Electronic and Electric Equipment Requiring PRECISE Voltage Control

General Electric Stabiltron a-c voltage stabilizers can be used in a wide variety of electronic equipment applications where precise control of voltage is required. The Stabiltron consists entirely of static components—there are no tubes to burn out and no moving parts to replace or maintain.

Stabiltron senses deviations from predetermined output voltage level by a detector. The error signal, through a feedback-controlled rectifier circuit, augments the voltage stabilizer action and provides almost instantaneous correction of output voltage.

Typical applications include computers, communications equipment, industrial process control, and X-ray equipment.

Voltage—The most common power supply voltages can be handled by the Stabiltron models listed. Stabiltron units are also provided for special voltage levels upon request.

Voltage—Stabiltron voltage stabilizers maintain extremely precise voltage in spite of wide fluctuations of line voltage, frequency, load, load power factor, and ambient temperatures.

Table below illustrates the effect of output of the maximum steady state conditions, within rated limits of some of the variables.

— TYPICAL OUTPUT VOLTAGE CHARACTERISTICS

	Excursion	Output Voltage Bandwidth†
Regulation	95 to 130	0.02 to 0.2%
Frequency	57 to 63 cycles	0.15 to 0.4%
Load	0 to 100% rated load	0.02 to 0.1%
Power	0.4 lagging to unity	0.01 to 0.1%
Temperature	-25C to 40C	0.01%/degree C

† As indicated because exact amounts are dependent on the static level of other variables. The Stabiltron unit is operated at less than rated load, the line voltage can be reduced considerably below 95 volts without serious deterioration of the output voltage.

Response—Under transient line or load conditions, elapsed time for correction of output voltage and transient excursion are normal bandwidth are key components to equipment operation.

ENCLOSED CONSTRUCTION—2-kva units are suitable for either wall or floor mounting; 5- and 10-kva units for floor mounting only.

PANEL CONSTRUCTION is suitable for standard 19-inch rack mounting.

OPEN CONSTRUCTION is suitable for horizontal or vertical mounting surfaces in equipment enclosures.

† The time required for the output to recover 63.3% from its maximum excursion.

§ The time required for the output to recover to normal bandwidth limits.

Harmonic Content—Under all rated ranges of line variation and most load conditions, the total harmonic content of the output wave form will not exceed three percent for a sine wave power source. Even under adverse conditions, when the power source is not a sine wave, the Stabiltron voltage stabilizer will correct the wave form to the load to approximately three percent harmonic content.

Rectifier-filter Loading—Since the output wave form is low in harmonic content, the Stabiltron voltage stabilizer can be connected successfully to a rectifier (capacitor input) filter load to the input of a d-c power supply having capacitor input filters.

REGULATED DC POWER SUPPLIES

INNOVATIONS**
IN ACTION

Improve Performance of Computers and Other Electronic Equipment

These component power supplies can be used in a wide variety of applications where relatively constant d-c voltage is required despite fluctuating line voltages. Computers, process control equipment, and electronic measuring devices are typical applications where demands for accuracy require constant regulation of voltage.

Performance-proved G-E d-c power supplies can be designed to suit your needs for either 50- or 60-cycle power sources.

‡ Indicates approximate percent increase in output voltage due to increase of load current from full load.

§ Rack mounting plate has four mounting slots on each end. Distance between centers of two outer slots is 7½ in., between two inner slots 3 in.

Mounting holes suitable for ¼-20 screws. Length of screw may vary with chassis height.

Typical circuit showing voltage stabilizers and filter components.

EFFECT OF INPUT VOLTAGE VARIATION

D-c power supplies can be designed for various input voltages and ranges. With all other variables constant, the output voltage will not vary more than ± 1 percent for a change in input voltage over the rated range of 97 to 130 volts input.

EFFECT OF TEMPERATURE CHANGE

For every 40C change in the ambient temperature, the output voltage level will change approximately one percent.

EFFECT OF FREQUENCY

A change of one percent in frequency will change output voltage level approximately one and one-half percent.

ISOLATION

All d-c power supplies provide electrical isolation between the a-c power source and the d-c load.

POLARITY

G-E d-c power supplies can be signed with the polarity you require. All standard units listed can be installed with either plus or minus grounded.

RIPPLE

Ripple levels of one percent meet most requirements. However, levels of ripple content can be designed into G-E power supplies.

EFFICIENCY

Efficiency ranges from 70 to 85 percent for normal output voltage levels. For unusually low output voltages at low power ratings, some decrease in efficiency may occur.

REGULATION

Load regulation characteristics depend on the rated output voltage and the power level of the power supply.

Prices subject to change without notice.

GENERAL ELECTRIC

volt-pac[®] VOLTAGE REGULATORS

- New solid-state control
- Precise output voltage control
- Fast voltage-correction rate
- Cabinet or rack-mounted models
- Magnetic circuit-breaker protection

General Electric's new automatic voltage regulator line provides regulated output voltages from varying input voltages. Models normally include a motor-operated Volt-Pac variable transformer, associated buck-boost transformers which handle the full range of input-voltage variation, and a new solid-state control.

Automatic regulators maintain a preselected output voltage level within 1 percent bandwidth, and are temperature compensated from -20 to +40C. They can be bench or floor mounted, or in smaller sizes, mounted in standard relay racks.

† Nominal output voltage operation requires no change in power connection, but does require selecting correct control transformer ratio. When operated at nominal 208 volts output, the regulator will correct for an input range of 181 to 236 volts, with the output voltage adjustable from 199 to 217 volts.

† Specified input voltage range is applicable for nominal output voltage. When operating at any other output voltage within specified range, the input voltage will change proportionately with the change in output voltage level selected.

† Kva based on nominal output voltage.

Waveform Distortion

Harmonic waveform distortion is introduced at any load or with any voltage. The output voltage waveform is a precise reproduction of input waveform.

Output Voltage

Output voltage for units nominally rated 115 volts is adjustable from 110 volts. Output voltage also is adjustable from 220 to 240 volts for rated 230 volts; from 440 to 480 volts for nominally rated units of 460 volts. Please note that the specified input-voltage range is applicable for nominal output voltage. When operating at any other output voltage within specified range, the input voltage range shifts in proportion with the change in output voltage.

Static-sensing Control

Static-sensing control combined with the new Sylvan-Ketter static-sensing circuit achieves the optimum in automatic accuracy. The voltage regulator is controlled automatically by a dead-band-type voltage-sensitive control circuit, either lamp or zener bridges. The circuit includes magnetic input breakers and an output voltmeter.

MERCURY DURACELL★ BATTERIES

Mercury batteries offer more power per unit of volume than any other type. They are available in a very wide range of sizes, voltages and shapes. Voltage stability is excellent throughout operating life. "R" types rated 1.35 volts per cell, "non-R" at 1.4 V. Mercury batteries cost less per unit of volume than ordinary zinc-carbon types. Alkaline batteries are "Best Buy" for lighting and photoflash. Zinc-carbon types are used where low price is more important than long-life economy. Mercury batteries listed below have flat terminals unless otherwise noted. Types with T suffix have solder tabs.

HIGH VOLTAGE POWER PACKS

COMPACT "M" SERIES 2 TO 75 KVDC

"M" series Power Packs are a completely new design. They are a small package directed to the use of the latest techniques and advanced materials. Many features have been incorporated with the highest quality materials, at the same time maintaining economy of cost.

Standard input voltage is 118 at frequencies from 50 to 500 cycles per second inclusive. Available also are input voltages of 220, 230 and 240 volts from 50 to 500 cycles per second inclusive. For 220 volts suffix the desired part number with "X", 230 volts "Y" and 240 Volts "Z". All units may be modified for other input voltages.

Output is filtered DC and standard potentials and current ratings are listed below. All units can be modified to provide any required potential and current below the values listed in the listing. The output potential can be varied from zero to the rated voltage and load by means of an autotransformer at the primary.

Output is 1% RMS or 2.75% peak to peak at rated current and voltage.

Life is 40,000 hours at 35°C and 5,000 hours at 50°C.

Finish is light blue gray lacquer per MIL-L-7178.

Units except the 75 KV, have two output terminals located from the container, permitting either terminal to be connected to ground or an intermediate point between terminals can be tied to ground. The 75 KV unit has a single output terminal for the output. The Power Pack is furnished to deliver a positive output potential relative to ground. If a negative output is desired it can be obtained as such from the factory upon request. The polarity can be easily reversed as required by opening the access port and reversing the selenium rectifier board. The remaining output terminal at low potential is left unconnected so that the lead current be monitored if required.

SCHAUER POWER SUPPLIES

New in design and applied engineering technology are Schauer standard and custom-engineered power supplies for communication, industrial and laboratory use. Among a wide range of types are fully transistorized series regulated and magnetic amplifier regulated, output regulated and non-regulated units. Illustrated here are but a few of the types and designs that are available.

Special features that can be incorporated include alarm cir-

cuits, current limiting circuit, bus switching, etc. All units are built of quality components, conservatively rated and completely wired for maximum reliability under continuous duty conditions.

Your power supply problems can be readily solved by consulting with Schauer — manufacturers of quality products since 1907. Ask your distributor for Schauer Catalog No. 640.

**SCHAUER Type SRA
Power Supply**

Magnetic amplifier regulated input and output with alarm circuit and provisions for switching to either positive or negative bus of a 3-wire D.C. system. Regulation is maintained within 1% total band for load variations from no load to 125% of full load and for input voltage variations of $\pm 10\%$. Available in capacities from 10 through 250 amperes in 48, 60 and 125 volt models for 3 phase, 60 cycle input lines at standard commercial voltages.

SCHAUER Type TRPS Power Supply

Transistorized regulated power supply for relay rack mounting, providing exceptionally close output regulation. Can be supplied in capacities up to 25 amperes maximum at voltage ratings up to 125 volts D.C. and in a variety of packaging and mounting arrangements.

SCHAUER Type SA48006 Power Supply

For operating and testing AM and FM 2-way and marine radios. Provides maximum 48 amperes at 6 volts D.C. or 24 amperes at 12 volts D.C. by switching. Output adjustable by multiple tap switch. The ventilated steel case for bench or wall mounting is 10" wide x 9½" deep x 15" high.

SCHAUER Type SK Power Supply

General purpose power supplies for applications where close output regulation and a highly filtered D.C. supply are not required. Bench, wall and floor mountings and many variations in output and characteristics are possible.

Sola CVDC Power Supplies

FAST, RELIABLE VOLTAGE REGULATION FROM A LOW-COST SOURCE

CVDC circuitry is so trim and simple that it can offer the utmost in performance and reliability. The constant-voltage transformer (originated by Sola) offers inherent current-limiting action that allows utilization of efficient, economical semiconductor rectifiers with low forward voltage drop. CVDC has these specific advantages:

Constant-voltage Sola transformer provides $\pm 1\%$ regulation for line-voltage variations as great as $\pm 15\%$, serves as the heart of CVDC power supplies for voltage-sensitive equipment.

Fast, dependable line-voltage regulation: within $\pm 1\%$ for fluctuations of $\pm 15\%$; voltage will return to regulation envelope in approximately 50 milliseconds.

Load regulation: from $\frac{1}{2}\%$ to 8% , one half to full load.

Automatic current limiting: short circuit protection; withstands load faults; high overloads cannot damage power supply or equipment components.

High efficiency: upwards of 75% ; low input-power requirements.

Simplified operation: no adjustments or maintenance; continuous duty.

Convection cooling.

Ripple: 1% rms maximum.

Ambient operating temperature: 40°C maximum.

Fixed output for fixed, intermittent, variable, or pulse loads.

All inputs 100-130 volts, 60 cps.

POWERSTAT®
Variable
Transformer
to provide
full range:

1

REGULATED AC VOLTAGE

—Regulates output voltage from any motor-driven 120 or 240 volt 50/60 cycle, single phase POWERSTAT Variable Transformer. For three phase, the unit monitors one line-to-neutral or one line-to-line voltage. Can be used for 480 volt duty by using step-down transformer. Output voltage remains within a 2-volt band on 120 volts and within 4-volt band on 240 volts.

2

REGULATED AC CURRENT

—Combined with POWERSTAT Variable Transformer, current/voltage transformer and current transformer, the unit will maintain constant output current accurate within $\pm 1\%$ of the maximum current setting.

3

REGULATED DC VOLTAGE—

Combined with a POWERSTAT Variable Transformer and a user-supplied d-c power supply, the unit provides regulated d-c voltage. Can be supplied for d-c use or can be modified by user.

BOURNS TRIMPOT® SUB-MINIATURE RELAYS AND MINIATURE, ADJUSTABLE TIME-DELAYS

SUB-MINIATURE RELAYS

TRIMPOT® relays feature single-coil design, rotary balanced armature, self-cleaning contacts and hermetically sealed case. Every unit goes through a 5000-operation run-in and

100% final inspection, including mass-spectrometer leak testing, for all important characteristics.

MINIATURE TIME-DELAY RELAYS adjustable up to 200 seconds

BOURNS TRIMPOT® time-delay relays have integral adjustment from 0.1 to 1.5 seconds. Addition of an external resistor or resistor-capacitor combination can increase adjustability to 200 seconds. Units are protected against accidental polarity

reversal and against transients up to 200% of line voltage. All models have welded circuitry and are vacuum-potted. MIL-Spec models have repeatable accuracy of ±5% max.

AMPERITE THERMOSTATIC DELAY RELAYS

Amperite Thermostatic Delay Relays are manufactured on automatic high production equipment — resulting in a low price — and top quality. Quality is not sacrificed at any point. For example, although contacts are rated 3 amps, 10 amp contacts are actually used. Similarly with all other parts—only the best available are used.

Amperite Thermostatic Delay Relays are actuated by a heater . . . and therefore can be used on A.C., D.C., pulsating current. Being hermetically sealed, Amperite Relays are not affected by altitude, moisture, or other atmospheric conditions. **REPLACED AS EASILY AS A RADIO TUBE.**

CIRCUITS SPST: Available only — normally open or normally closed.

HEATER VOLTAGES AVAILABLE: 2.5, 5.0, 6.3, 12.6, 26, 50, 115V.

For 220V use a 6500 ohm-5 watt resistor in series, with 115V heater.

HEATER WATTAGE: Standard and Miniature Relays—all voltages—2w prox. All heaters may be operated continuously. Heaters will not be damaged by a 50% voltage overload for duration of 1 hour or less.

ARIATION OF DELAY WITH HEATER VOLTAGE

FIG. 1—Effect of change in heater voltage on delay in seconds. Only low voltage heaters (2.5 to 26 V.) incorporate heater voltage regulations as shown in diagram.

For 22 to 30 V. supply: We recommend Amperite Delay Relays with 26 V. heaters for airplanes and similar power supplies. These heaters are regulated for battery variation of 22 to 30 V. as shown in this diagram.

		220V - 1a AC	800V	800V
FLASHERS		1/2a AC		

CONTACT DROP: — 0.1V — Prox. at 1A.

DELAYS AVAILABLE:—From 2 to 180 seconds. Relays can be used in series to obtain longer delays. The delay of any individual relay up to 120 seconds can be increased up to 25% by using a resistor in series with the heater. Delays above 120 seconds cannot be increased. Relays with short delays such as 2 to 5 seconds can be increased 50%.

LIFE of any individual relay will depend on the service the contacts are subjected to. With a 115V — 2A A.C. non inductive load the contacts will withstand at least 250,000 operations. **SHELF LIFE** of Amperite Delay Relays is over 10 years.

INDUCTIVE A.C. LOADS: When breaking an inductive A.C. load, use a condenser of .01 to .1 mfd across contacts. In some cases putting a 20,000 ohm, 5w. resistor across the contacts reduces the arcing considerably.

Relay Contacts should not be used on voltages above 220V.

FOR INSTANTANEOUS RECYCLE AND ELIMINATION OF CHATTER

Fig. 1

For instantaneous recycle and elimination of chatter. Cannot be used with Sensitive Relays.

Magnetic Relay requires extra N.O. contact as shown at 'E'.

Fig. 2

For instantaneous recycle and elimination of chatter when Sensitive Relay is used.

Magnetic Relay requires an extra SPDT contact as shown at 'F'.

INSTANTANEOUS RECYCLE: This can be obtained by using a normally open Amperite Delay Relay in conjunction with a Magnetic Relay as shown above. If normally closed is required — use a normally open Amperite Delay Relay — and use the NC contacts on the magnetic relay. Choose the Amperite Delay Relay for the voltage required and the delay required (e.g. — 115N030 — would be used on 115 volt supply — for a 30 second delay).

LONG CYCLE RELAYS: are also available. For example, Amperite Delay Relay 115N07T has a delay in closing of 3 to 7 seconds. After heater is connected, contacts will remain closed for 30 seconds minimum. Write us about your requirements.

Flashers operate approximately ⅓ on, ⅔ off. The percentage time on can be increased by reducing voltage of heater.

Flashers available only in quantities of 12 or less. Cannot be supplied in production quantities.

Normally closed flashers are standard, and are indicated by the letter "F." The number following letter "F" denotes flashes per minute. For example a 6F30 flasher, has 6.3V heater, normally closed 30 FPM with a ± 15 flashes per minute tolerance. A 6F30T, would be the same type but in 9-pin miniature. Flashers are available from 30 to 90 Flashes per minute with tolerances as shown in the chart below:

FLASHERS have contact rating of ½ a 115V AC, non-inductive.

Ganged T-Bar Switches

Toggles may be ganged for controlling additional circuits... 48, 72, 108, etc. Shown here, 108 poles.

T-BAR Connectors save time and reduce installation costs using individual snap-in crimp terminals crimped to pre-stripped wire and then snapped into a contact block, which forms the connector. The connector is pushed onto the wafer terminals, eliminating soldering. Because we offer a connector, rather than a receptacle, harness work can be completed outside the chassis and therefore no fancy chassis work is required to accept a receptacle. It not only makes the metal work simpler, but it also saves layout engineering and drafting time. Since T-Bar Switch/Relays are so easily mounted, they are often found on the back of meter panels or on their own brackets.

sides available in both intermittent and continuous duty types. Intermittent types should not be energized for more than 15 minutes, or be permitted to rise more than 85° C. above 24° C. ambient, without giving sufficient time between operation cycles. Continuous duty types are designed so they will not rise more than 85° C. above the ambient temperature when operated at rated load. Plunger has slotted end with $\frac{1}{16}$ " diameter hole for coupling.

Ordering give the following information: (1) Solenoid Number; (2) Operating voltages and AC or DC current; (3) Intermittent or intermittent duty (if intermittent, give the cycle of operation, length of time current will be passed through the coil, and any other pertinent information); (4) Maximum stroke and maximum pull required.

Data listed in this bulletin obtained during "cold" operation.

GUARDIAN SERIES 2400U AC SERIES 2405 DC POWER RELAY

15 Amperes

Size: $3\frac{1}{2}$ " x $2\frac{1}{2}$ " x $2\frac{1}{8}$ ". Shipping Weight: 8 ounces. Mounting: Two .196" Diam. holes on $1\frac{1}{2}$ " centers.

In power applications that require up to 15 ampere contacts the Guardian Series 2400 AC, or Series 2405 DC Power Relays are specified.

Both have standard DPDT contacts rated for 15 amperes non-inductive, or 1 HP at 115/230 volts, 60 cycles. Series 2400 standard coil voltages are 6, 12, 24 and 115 VAC. Series 2405 standard coil voltages are 6, 12, 24 and 110 VDC. Inverted coil construction protects armature and contacts. Armature extension permits manual circuit testing. Screw type terminals easily accessible for top or bottom connections. Easy to mount recessed auxiliary switch, up to SPDT for 10 ampere operation, available for both AC and DC versions.

TIME DELAY RELAYS

SERIES TD

TIME DELAY ADJUST
EXCEPT ON D111-0802

This is the most accurate and compact solid-state time-delay available commercially from stock. 3PDT contacts handle up to 10 amp resistive load. Six standard model relays for 24V., DC and 115V., AC 50/60 cycles provide delays from 1 to 180 seconds. All units utilize silicon semi-conductors and precision tantalum capacitors for reliability. 15-turn screw-type potentiometer furnishes high resolution and accuracy. Accurate to 5% of a nominal setting over its complete temperature and voltage range. Repeatability is 2% after a line interruption of 50 milliseconds. Termination can be quick disconnects, socket or solder connections. Size: 3"x1½"x1¼". Shpg. wt., 5 oz.

SERIES TDO

Incorporates many features of more expensive units, but is the most economical 5 amp DPDT 115V., AC solid-state adjustable time-delay relay ever offered. Delay is adjustable from 0.5 to 30 seconds on attract and is controlled by 10-turn potentiometer for high resolution, easy reset and accuracy. U terminates in octal plug. Accurate within 10% of a nominal setting over entire temperature and voltage range. Repeatability is within 2% after a line interruption of 100 milliseconds. Size: 3"x2½"x2¼". Shpg. wt., 8 oz.

circuit selection wiper on Continuous Rotation Stepper moves in one direction only, upon energization of the step coil. This type of stepper is available in standard 24 point (MC) or 40 point (PC). The new MC Midget Continuous Rotation Stepper is fully adaptable to repetitive sequence function. The 24 bridging contact deck is evenly divisible into eight possible sequences. The PC stepper features stepping speeds up to 30 steps per second and an average life expectancy of over 4,000,000 steps.

Pepper contact points are rated 1½ amps
ive, at 115 V., 60 cps. Coil* Voltages are
AC, 24 DC 60 cps.

The circuit selecting wiper on Electrical Reset Steppers can be reset to zero or home from any desired position, by energization of the reset magnet. They are frequently employed to record counts by various numerical groups, then resetting automatically.

Type M.E.R. A direct drive (steps on energization) with positive mechanical reset interlock actuated by the reset magnet and unlocked on the first energization of the step magnet. Assures positive reset on as short a pulse as one-hundredth of a second. By interconnecting two or more Steppers, count can be increased to any desired total counting by tens, or any convenient multiple. Will control a sequence of operation and then automatically reset to starting position.

Type P.E.R. Operation same as M.E.R. but with up to 36 active contacts.

Add and subtract steppers are basically continuous rotation types with the added feature of being able to reserve the movement of the selecting wiper when required.

Type IR-MAS A midget add and subtract stepper incorporating a cam actuated switch which operates at zero position. Used primarily to indicate a zero balance between pulses supplied to the "add" coil as compared to pulses received by the "subtract" coil.

Type IR-RAS These are bi-directional steppers whereby the selector wiper moves in either direction depending on which of the coils are energized. The RAS is frequently used as a drive control for potentiometers or variable transformers.

GENERAL PURPOSE RELAYS

MINIATURE PLUG-IN LOW PROFILE LOW COST (SERIES MKTR)

Despite its compact size this new totally enclosed, low cost, low profile miniature relay has not compromised the high quality of its progenitor the Series MK open relay. The low mounting profile (dust cover included) has been made possible by incorporating the frame of the relay with the connector-header. Thus a certain basic hardware has been eliminated resulting in important size reduction. Versatility is also assured since the standard terminals can be used with Amp snap-on connectors, printed circuits, or plug-in receptacles. Also available with studs for chassis mounting. Termination can be used for soldered connections. The plug-in-receptacle is true 10 ampere construction. Lugs can be used for either solder or snap-on connections. NEW MINIATURE SENSITIVE RELAYS (SERIES SK) 60 MILLIWATTS PER POLE

This entire series of SK type relays is identical in construction to our MK series miniature relays, with one essential difference—the special alloy used in pole and frame increases the magnetic

flux many times thus making the relays very sensitive to very low power levels—only 60 milliwatts per pole.

TIME DELAY RELAYS

PLUG-IN TYPE (SERIES TRP)

The series TRP Time Delay Relay provides a pre-set delay between the closing of one set of contacts and the subsequent operation of a set of SPDT load contacts.

The series TRP initiates from a sustained switch closure to L1 and L2. The unit resets instantaneously when this circuit is opened; ready for another timing operation.

The series TRP is available in two operational options:

Type "A"—If sustained closure is interrupted during time cycle, unit will not reset. When closure is again made, timing will continue to give originally selected time delay.

Type "B"—If sustained closure is interrupted during time cycle, unit will instantaneously reset.

REED RELAYS — 3 STANDARD TYPES

In computer, data processing and guidance system development, design engineers are enthusiastically applying dry reed relays in place of switching diodes. The reasons: miniature profile—life expectancy exceeding 100,000,000 operations—less heat generated compared with switching diodes—3 millisecond operating time and very high resistance in the open contact stage.

To efficiently serve the growing demand for dry reed relays in these and other applications, Line Electric now stocks these 3 standard types for immediate delivery in prototype quantities.

BUZZERS D.C. - A.C.

VARIABLE SOUND AND PITCH D.C. - A.C.

The series BD buzzers are designed for use in offices, plants, etc., where quality, good appearance and dependable operation is demanded. Three sizes of buzzers are available, each size varying in tone and volume of sound. However, the volume of sound and pitch of each size buzzer can be varied by means of double, locking adjustments. The three sizes of buzzers are equipped with phosphor bronze springs and pure hard-drawn silver contacts. They are bug and dust-proof with tight-fitting polished chrome covers.

The General Purpose Relay with Telephone Type Reliability

The MAGNECRAFT 88 Relay is an abrupt departure in clapper type relay design. Dimensionally interchangeable with relays made by others the 88 has been developed to provide Telephone Type Relay reliability at general purpose relay prices.

Unique in relays of this type MAGNECRAFT 88 Relays have rugged, precision-built hinge-pin armature bearings with oversize bearing surfaces—the same construction used in the finest telephone type relays for lowest friction and maximum contact effectiveness with stabilized adjustment over long life.

Glass insulation provides great di-electric strength unaffected by humidity and temperature changes.

Molded Nylon bobbins with ruggedized coil terminal inserts eliminate possibility of shorts.

Built-in contact wipe with riveted contacts further advance reliability through long life.

The many refinements, plus MAGNECRAFT Quality Control and Inspection Standards, give you hidden values beyond price—unseen values that keep making friends through years of dependable service.

When you inspect and compare you will soon see that many MAGNECRAFT 88 extra values are not hidden.

Ultra-Reliable Encapsulated Printed Circuit Reed Relays

1. Reed contact leads are soldered stress-free to rugged terminal posts.
2. Terminal posts extend through the terminal board as printed circuit pins.
3. The complete assembly is encapsulated, which provides:

- a. Mechanical protection for the glass capsule, contact leads and coil.
- b. Full protection against tampering and contaminating atmosphere.
- c. Rigid positioning of terminal supports and printed circuit pins; stresses on circuit pins cannot transmit to the reed contact leads and affect relay adjustment.

The package illustrated is a Class 102PC, DPST-NO Standard Size Relay (page 7) cut away to show typical assembly of one reed.

Construction of miniature encapsulated printed circuit reed relays (pages 5 and 6) is similar to the standard size.

104PC—The Low Profile Printed Circuit Reed Relay Package that combines High Reliability and Low Cost

Reed Relay contacts are hermetically
sealed with inert gas in glass capsule;
completely protected from contamination,
tampering.

Contact leads are soldered (or welded)
lead-free to rigidly positioned terminal
ports.

The combination circuit board pins and
terminal supports are securely fastened to

terminal board; stresses on circuit board
pins cannot transmit to contact leads and
affect relay adjustment.

4. Integrally molded Nylon bobbin and
mounting base combine electrical insulation
and mechanical protection for the glass
capsule.

5. Snap-on steel cover adds mechanical
protection and magnetic shielding.

Includes Indicator, Plate, Thyatron
and Latching Versions in Unenclosed
and Enclosed Types

Simple, rugged, low cost relays handling substantial power for small size. Uncomplicated design provides unusual flexibility for making and changing connections and mounting. Stock includes relays in versatile enclosures, some with indicator light, also plate, thyatron and latching versions. Wide commercial and industrial use where economy and versatility are important.

Basic (Unenclosed) Relay: All connections terminate on barrier-type terminal panel on combination solder—quick-connect

(push-on) lugs which accept AMP 110 female connectors. The terminal panel is conveniently incorporated into printed circuit boards. Fixed contacts are integral inlay on terminal itself. Normally furnished with a 6-32 x 1/2" mounting stud and non-tum boss (or lug for 4-pole relays). A 6-32 threaded hole is optional. Unenclosed relays can also be mounted by plugging their panels into Ohmite SOGPR sockets. See "Socket" following.

Contact Ratings: Two ratings—fine silver contacts, 5 amps at 115 VAC or 32 VDC; silver-cadmium contacts, 10 amps.

Insulation: Tested at 1500 VAC.

Coil Wattle: 1.4 watts DC operation; 160 watts (2.0 volt-amps) AC except 2.4 watts (3.70 volt-amps) for 4-pole AC and AC latching relays.

ENCLOSED RELAYS (GPRTA-, GPRTT-, GPRTS-, GPRTP-). Four types of clear plastic enclosures as follows:

Chassis Mounting Types: "GPRTA—" ("Terminals-Above-Chassis" type) has terminal panel opposite to mounting flange; "GPRTT—" ("Terminals-Through-Chassis" type) has terminal panel on same end as mounting flange, requires chassis cutout; "GPRTS" type (Terminals for Socket Use) is similar to GPRTT but has no mounting flanges. It is intended strictly for plug-in mounting in Ohmite socket "SOGPR" (see "Socket" below).

Plug Base Type: "GPRTP"—employs octal plug for 1 and 2 pole relays; 11-pin plug for 3-pole. The octal plug base is integral with relay for rigidity—is designed with recessed pins which meet UL spacing requirements (150V).

* Column heads carry symbols to indicate UL or CSA (Canadian Standards Assn.) approval. The grey tint indicates that relay is recognized under UL "components program" (File No. E33069, Guide No. 380W1.14C, Assignment No. 62C355A). CSA File No. is 21909. See explanation in "UL and CSA Approval."

† 4-Pole GPRTS relays are not covered by CSA.

‡ GPRTA and GPRTT types as listed by UL, differ slightly from the stock versions above and consequently, are made to order. These UL versions have a "U" added to the catalog number, such as in "GPRTAU." They also have CSA approval.

MODEL GPR GENERAL PURPOSE RELAYS

Socket (SOGPR): Unique socket fits the terminal panels of all GPR relays and provides over-the-surface spacing to meet requirements for 150 volts. Requires chassis cut-out to mount. Hold down lugs (see illustration) for unenclosed and enclosed relays, are provided with a socket but are not required except under conditions of vibration or shock. Socket solder terminals will also accept TP 110 quick-connectors. See socket list.

Indicator Relay: Incorporates light bulb to indicate energized condition of coil. Checked only in GPRTP enclosures described in preceding. Neon bulb furnished with coil ratings 70 volts and above; incandescent bulbs for coil ratings below 70 volts.

Plate Relays: Feature same physical construction as standard general purpose relays but are adjusted for greater sensitivity and can be used as electronic circuit components, i.e., in the plate circuits of standard vacuum tubes.

Thyratron Plate Relay: Designed specifically for plate circuit of thyratron tubes 2050 and 2D21 with 115 VAC supply (see diagram). Also suitable for operation in series with silicon controlled rectifiers in a 115 VAC supply. Ready to work, no capacitors or adjustments required, no solder. Available unenclosed and in most GPR enclosures.

MODEL DO LATCHING RELAY (DOLEX-)

DOLEX-3T, 3PDT
DOLEX-5T, 4PDT

Consists of Model DO relay and a "reset magnet" with both armatures mechanically latched so that the normally open contacts of the relay remain closed when the relay energizing voltage is removed. The relay releases to normal position when the reset coil is pulsed. Permits "holding" of circuits without continuous coil current. Coils of stock units (both relays and reset coils) are 115VAC. Available with 3 or 4-pole relays. Weights: 3-pole—16.5 oz.; 4-pole—17 oz.

MODEL DOSY RELAY FOR PLATE CIRCUIT OPERATION

The high operating sensitivity makes the DOSY relay adaptable to a wide range of electronic control circuits, such as plate circuit controls, etc.

The insulation is of high grade, molded phenolic material. At 115 v. AC or 32 v. DC resistive load, Model DOSY relay has a contact rating of 15 amperes.

There are two DPDT types, one having 10,000 ohms coil resistance (maximum pull-in current of 8 ma. DC); the other having 5,000 ohms coil resistance. Dimensions are same as for Model DOSX next column.

MINIATURE INDUSTRIAL RELAYS

"VersaPac" 67 Designed for industrial applications requiring 1 to 8 form C where space, weight, and cost are important. Single and bifurcated contacts rated at 3 and 5 amps are available. The use of armco magnetic ingot iron and a one piece frame and core provide for unusually precise adjustments. Mechanical life expectancy is in excess of 100 million operations. A plastic cover protects the relay, and sockets are available.

TIME DELAY • SENSITIVE • HIGH VOLTAGE RELAYS

TYPES DB & DM With their adjustable time-delay range, these relays excellent for use in preheating tube filaments; for specialized lighting circuits; photographic controls, protection applications, etc. DB provides time-delay before break. DM provides delay before make. Both series utilize bi-metal thermal units which can be adjusted for delays from 5 to 60 seconds. Cooling of the thermal units for proper re-cycling requires 8 to 10 times the delay period.

STANDARD PLUNGER
STYLES AVAILABLE

TYPES 38, 39, 40, 41, 42, 51 Solid frame solenoids using high-grade steel in all parts of the magnetic circuit. Carefully controlled annealing, after all machining operations are completed, assures maximum efficiency. The frame is dovetailed and staked to the end plate, adding mechanical strength and increasing the performance of the magnetic circuit. Plungers and plunger stops, which are made of annealed and specially processed steel, are available in standard types for specific operating requirements. Type 51 is a laminated frame solenoid and has been designed and engineered to meet all of the requirements of the highest quality A. C. solenoid. Special production technique and rigid quality control combine to provide a highly efficient unit. The frame is composed of silicon steel laminations securely riveted to a steel frame. Pole faces are precision ground and equipped with copper shading rings. Silicon steel laminations are also used for the plunger.

SPECIAL PURPOSE RELAYS

AP SERIES RATCHET, IMPULSE

A reliable compact unit for applications requiring on-off or reversing action on alternate operations. Positive ratchet operation at all speeds on impulses as short as 60 ms. Intermittent operation only. Mounting: Three $\frac{3}{16}$ " dia. holes on $3\frac{3}{4}$ " x $\frac{1}{8}$ " triangular centers. Contacts: $\frac{3}{16}$ " dia. silver. Weight: 7 ozs. Coils for intermittent duty only.

BU BUZZER AC operated coil with a spring steel armature which buzzes when coil is energized. Used extensively in test equipment, laboratories and a host of other applications where a small light weight, dependable buzzer is required. Weight: 1 1/2 ozs. Mounting: No. 6-32 tapped core.

GM SERIES Unusually versatile switching makes this impulse/sequencing relay especially suitable for single coil latching. The 2 Form C contact arrangement is switched alternately by cam action during drop-out of the armature. It can also be furnished with additional 2 Form C auxiliary contacts (designated by "L"). AC version operates on a 50% coil duty cycle (5 Min. max.). Mounting: 8-32 tapped core with locating boss. Weights: With aux. contacts 4 1/2 ozs. Without aux. contacts 4 ozs.

The GM1N10 and GM1N12 AC or DC use the basic GM structure with uni-directional printed circuit boards with 10 or 12- steps, respectively. The board is attached to an extension of the ratchet shaft. The movable contact arm advances one position each time the armature drops out. Contact rating: .25 amps. Contact arrangement: SP-10 pos. and SP-12 pos. Size: 2.312" x 1.875" x 2".

KB SERIES LATCHING RELAY

Both release and trip coils must be for the same voltage. One coil operates relay to set latch and other coil releases it. Ideal for memory work and overload applications. Operates on momentary impulse to either coil. Mounting: Two $\frac{3}{16}$ " dia. holes on 1 1/2" centers. Weight: 6 ozs. Contacts: $\frac{1}{16}$ " dia. silver rated 5 amps; "C" suffix indicates silver cadmium-oxide contacts on movables rated 10 amps. AC relays with 5 amp. Contacts carry U/L component recognition (File No. 29244) and are CSA* listed. AC coil for intermittent duty only.

KM SERIES Subminiature relay for applications requiring unusually small relays with up to 3-poles, $\frac{3}{16}$ " dia. silver contacts. Withstands 30g mechanical shock and .08" excursion 10 to 55 Hz mechanical vibration. Used extensively in small business machines, alarm systems, automatic toys and communications systems. Mounting: One 2-56 tapped core and locating half-punch. Solder terminals. Weight: .58 ozs.

KT SERIES ANTENNA SWITCHING RELAY

Glass base insulation for minimum RF loss to switch 300 ohm line. Mounting: One No. 6-32 threaded stud. Contacts: $\frac{1}{16}$ " dia. gold-fashed silver. Weight: 1 1/2 ozs.

POTTER & BRUMFIELD

IS A MEMBER OF THE

NATIONAL ASSOCIATION OF RELAY MANUFACTURERS

JR Series Dry Reed Relays

fast response, reliable performance, small size and long life, together with high sensitivity recommend Potter & Brumfield JR Series dry reed relays for data processing, computer equipment, logic circuitry and various other sophisticated control circuits.

TWO TYPES OF CAPSULES

reed glass capsules with two types of contact arrangements, Form A (SPST-NO) and Form C (SPDT) are available. When used with a permanent magnet Form A is

Form A

changed to a Form B (SPST-NC): This arrangement requires that coil polarity be observed; it uses a two-cavity bobbin. By combining one Form A with one Form B, a single Form C (SPDT) break before make arrangement can be furnished; it uses a ree-cavity bobbin.

True Form C (SPDT) uses a reed switch with two stationary and one movable contact.

Form C

the movable contact is normally closed until the coil is energized, causing a true Form C (SPDT) break before make; it uses a single-cavity bobbin.

SPECIFICATIONS

OUTLINE DIMENSIONS (NOMINAL)

MERCURY-WETTED CONTACT JM SERIES RELAYS

Rare long life, high speed, and unvarying dependability—all are the result of the basic component of these relays: a hermetically sealed glass capsule. It contains the contact arrangement and a small reservoir of mercury sealed in a high pressure hydrogen atmosphere. A film of mercury is renewed for every operation—that's why you can think in terms of billions of operations without contact bounce, pits or welds.

TWO TYPES OF CAPSULES

The capsule used in JMF modules and JML relays has a SPDT, break-before-make (Form C), non-bridging contact arrangement. Each capsule used in JMP, and JM1 to JM4 relays has a SPDT, make-before-break (Form D), bridging contact arrangement. JMF, JML and JMP series achieve a high rate of sensitivity by factory-adjusted magnet biasing.

CONTACT RATINGS

JMF and JML: 500V max., and 2 amps max., 100VA max.*
JMP and JM1 to JM4: 500V max., and 5 amps max., 250 VA max.*

*With contact protection unless in a low level circuit. Details of a simple protection circuit consisting of resistor and capacitor in series are packed with each relay.

CH SERIES

CH series solid state time delay relays are engineered for a wide range of industrial applications where not-too-critical performance suffices and where economy is a factor. Enclosed in a molded white nylon dust cover, CH time delays are knob-adjustable and equipped with plug-in octal-type terminals. A quality P&B DPDT relay is mounted internally.

CD SERIES GENERAL PURPOSE

A wide selection of operational configurations, all with accurate time delay values, fast reset time and excellent repeatability, are available in the CD series solid state time delay relays. Three modes of timing are available: knob-adjustable, resistor-adjustable and fixed, CD types with delay "on operate" or delay "on release" are listed. Designed for the most sophisticated accuracy requirements.

For Bi-Stable or Center-Stable Operation

Small size, ultra-sensitivity and high speed switching together with efficient, bounce-free contact action characterize P&B MDP polarized relays. Their operation depends on both the magnitude and direction of the coil current. Two types of contact arrangements provide the following action when the coils are de-energized: *Bi-stable* — armature remains in its last energized position; *Center-stable* — armature remains in center-off position with contacts open. Contact materials as listed. Temperatures: -60°C to $+85^{\circ}\text{C}$. Measuring only $1\frac{1}{16}"$ sq. by $1\frac{1}{16}"$ high (seated), MDP relays are equipped with a plastic dust cover and 8 or 12-pin plugs. Weight: $4\frac{1}{4}$ ozs.

Types MDP-900-1 and MDP-930-1 (with extra long life contacts) will directly replace Western Electric Type 255 relays. $2\text{-}11/16"$ square x $3\text{-}3/4"$ overall height. Weight: 10 ozs.

ROTARY STEPPING SWITCH TYPE RT

The SCHRACK Rotary Stepping Switch is a combination of three reliable components:

1. Standard Relay with 1 Form C heavy-duty contact.
2. Ratchet driven Rotary Switch consisting of four banks of twelve or ten points each with sliding bifurcated wipers.
3. Ratchet driven Stepping Relay with two cams which actuate one Form C contact each.

Schrack Rotary Stepping Switches have a highly efficient magnetic circuit and a driving mechanism designed for maximum operating safety. All components are mounted on a rigid die-cast light metal frame and contacts are permanently molded in a sturdy melamine plastic.

ROTARY SWITCH terminals are arranged in a circular pattern with four groups of twelve points each. A conversion can make it operate with 3 groups of 16 each. An alternate version with 4 x 10 points is available for applications requiring decimal counting. Each group occupies a quadrant of the circle and contains a common bus which is connected to the twelve or ten insulated points in sequence by means of a sliding wiper as the switch is operated.

The sliding contacts are bifurcated spring phosphor bronze wipers. The wiper contact assemblies are insulated electrically from each other and the wipers are of the non-bridging type.

The contacts of the rotary switch bank are capable of carrying .5 amps on a steady state basis and of interrupting 1 amps at 110 volts DC with a resistive load or .2 amps at 115 volts AC. Coil Voltages 12, 24, 48 or 110 DC.

TYPE RT 304 — 4 x 12 Contact Points \$19.00 ea.

TYPE RT 404 — 4 x 10 Contact Points \$19.00 ea.

SCHRACK

RELAYS

SINGLE COIL-TYPE CRD MAGNETIC LATCHING RELAY —

This is a bi-stable power relay held in operated position by a strong residual magnetism of the coil core after the coil is de-energized. The coil core is of a special alloy having sufficient remnant magnetic force to hold the armature locked-in for an indefinite period of time after being energized momentarily.

This Schrack relay has only one coil winding. In operation this coil is energized by half-wave rectified AC obtained in series with the relay coil and mounted in the circuit outside the relay case. For de-magnetizing, to return the armature to its normal position, the same relay coil is energized by full-wave A.C., however, with reduced amplitude obtained by a series-connected resistor. The effect is to destroy the remnant magnetism in the coil core and ready the relay for another pull-in operation.

Sockets Available

by means of a diode such as Type IN3255 connected in series with the relay coil and mounted in the circuit outside the relay case. For de-magnetizing, to return the armature to its normal position, the same relay coil is energized by full-wave A.C., however, with reduced amplitude obtained by a series-connected resistor. The effect is to destroy the remnant magnetism in the coil core and ready the relay for another pull-in operation.

Although AC operation is recommended, it is possible to operate the Schrack Magnetic Latching Relay with a D.C. pulse using reduced levels and by reversing polarity as shown in technical data sheets.

In design, this magnetic latching relay is identical with the Schrack Type CAD plug-in relay. Contacts are rated at 5 or 10 amps depending on materials used. DPDT (2 form C) or 3PDT (3 form C) versions are available.

As can be readily seen, this relay has distinct advantages over the mechanical type since there are no parts subject to wear and friction. Long, trouble-free service and freedom from maintenance may be expected. Since Type CRD is plug-in, chassis may be pre-wired, and its compact design requires less than half the space of the conventional mechanical design. An indefinite "memory" storage and safe programming of complex circuits open up a wide range of potential uses for this most advanced relay design which is being offered at an unusually low commercial price.

LATCHING RELAY — TYPE CBT

A dual coil mechanical latching relay. Each relay operates on a momentary impulse on either coil and is held in the set position until released by an impulse on the other coil. Both coils must be for the same voltage and are continuously rated.

Contact rating: 10 amps. (Based on 600 operations per hour at 115 volts AC 60 cy. resistive load).

May be operated continuously at 1000 cycles per hour.

The CBT relays have a transparent dust cover and a sturdy base plate of insulating material. Screw-type terminals are provided for all contact and coil connections. Available in voltages from 6-230 AC and 6-110 DC.

OPEN RELAY TYPE CA

MINIATURE RELAY TYPE RK

A small comb-actuated relay (laminated phenolic blade lifter plate) with remarkably high performance figures in spite of its small dimensions. A well-designed magnetic circuit and ample winding space result in high contact pressure up to 18 grams using low operating power.

The RK Type Relay is available with DC or AC coils (50 to 60 c.p.s.). The standard contact material is fine silver (gold-plated), with a rating of 3 amps. Special contact materials on request. Coils are vacuum impregnated with high quality electrical varnish. The SCHRACK Miniature Relay, Type RK, is also available with a clear transparent plastic dust cover, protecting the contact pile-up against contamination and mechanical damage.

Pierced solder lug terminals are standard. Special lugs for printed circuits are available on special order. Maximum contact pile-up 6 C's.

AXIAL LEAD VITREOUS RESISTORS

Available in three sizes 3, 5 and 10 watts, Series VC3D, VC5E and VC10F. Axial lead resistors are particularly adapted to printed circuit, terminal board, and point-to-point wiring applications. These resistors save considerable space because of the elimination of mounting brackets and terminal lugs. Standard resistance tolerance is $\pm 5\%$ for 1 ohm and higher and tolerance below 1 ohm is $\pm 10\%$. Attractively packaged in a newly designed carton particularly adapted to this new axial lead resistor, beautifully finished with Clarostat's new vitreous shade of teal green.

POWER RESISTOR DECADE BOX

The Resistance Decade Box, Model 240-C for bench use — Model 250 for rack mounting, provides any resistance from 1 to 999,999 ohms for working circuits at the flip of a switch. Six front-panel dials enable selection in 1 ohm increments, the total value being read directly from the dial. Each decade has a power rating of 325 watts maximum, 1,000 VDC or 660 VAC maximum.

Resistance changing switches are of the type that prevent a resistance breakdown between steps, thus protecting delicate meters and measuring instruments in the circuit. Knobs indicate the resistance

value being used at a glance.

Clarostat GREENOHM Power Resistors are used throughout. These components are wire-wound power resistors on ceramic tubes and coated with an exclusive Clarostat inorganic cold-setting cement, providing the most rugged, long-lasting, trouble-free power resistor available. The resistors are mounted in rigid metal supports.

Overall length: 240C: 13" long x 8 1/4" deep x 5 1/4" high, weight 11 1/2 lbs. 250: 19" long x 13 1/4" deep x 7" high (fits in standard 19" relay rack), weight 18 1/2 lbs.

SUGGESTED USES: Resistance determination, Load Resistance, Meter Multiplier, Calibrating Meters, Providing any desired ohmage as a universal power resistor.

"GREENOHM"* WIRE-WOUND RESISTORS

FIXED TYPES Wire-wound resistors for most rugged applications. Will withstand tremendous overloads and temperature changes without altering resistance values or appearance. Wire windings on high grade ceramic tubing and coated with special inorganic cement. In accordance with EIA standards, overall tolerances are $\pm 5\%$ for resistors of 50 ohms and higher. For resistors of 49.9 ohms and lower, overall tolerances are $\pm 10\%$.

ADJUSTABLE TYPES Same electrically and mechanically as Fixed types, but incorporating sliding band or bands for tapping any desired resistance values. Slider band tightened by means of screw. In accordance with EIA standards, overall tolerances are $\pm 10\%$.

PRECISION WIRE WOUND RESISTORS & NETWORKS

Charles T. Gamble Industries has engineered and designed non-inductive precision wire wound resistors to meet the requirements of Mil-R-93D. These resistors are completely sealed against the effects of high humidity and salt water immersion cycling. The material used in the manufacture of our resistors has a very high dielectric strength. The bobbin material used in winding the resistors is one and the same as the encapsulating material. Matched thermal coefficients of expansion therefore will eliminate the possibility of shorted turns and distorted windings when resistors are being used in their application.

NETWORKS: RC NETWORKS, LADDER NETWORKS, VOLTAGE DIVIDERS, BINARY NETWORKS

Sub-miniature Axial lead Precision resistors have been designed for applications where space is a prime factor. All resistors are hermetically sealed with epoxy resin to protect the windings against the effects of high humidity, and salt water immersion cycling. Resistors can either be inductive or non-inductive wound.

Standard temperature coefficient ± 10 PPM/ $^{\circ}$ C. Lower temperature coefficients can be supplied on request. Standard tolerance 1%, 0.5%, 0.1%, .05%, .025%, .02%, .01%.

Encapsulated printed circuit resistors are designed for printed circuit board application, where space is a factor.

Printed circuit resistors are wound with resistance wire having a very low thermal E.M.F. to copper.

Printed circuit resistors can be purchased in standard tolerances of 1%, 0.5%, 0.1%, .05%, .025%, .02%, .01%.

All resistors with tolerances of 0.1% and below are stabilized by artificial aging and temperature cycling before shipment.

Radial lug type resistors have been designed to meet the requirements of Mil-R-93D.

These resistors are completely sealed against the effects of high humidity, and salt water immersion cycling.

The materials used in the construction of radial lug type resistors are identical to those used in the construction of axial lead types.

These resistors are supplied with a thru hole for mounting to the chassis by means of a #6 thru bolt.

Our standard resistors are supplied with temperature coefficients of ± 10 PPM/ $^{\circ}$ C.

Lower temperature coefficients can be obtained upon request.

Standard tolerance 1%, 0.5%, 0.1%, .05%, .025%, .02%, .01%.

CARBON COMPOSITION RESISTORS

TYPE GBT CARBON COMPOSITION RESISTORS

PERFORMANCE CHARACTERISTICS

These are shown in relation to MIL-R-11 specification limits on the following two pages. A performance span or range is given for each important characteristic. You know in advance the typical limits within which IRC carbon composition resistors can be expected to perform.

The performance data are based on many thousands of individual tests made on random samples taken from production. The resistors are tested to MIL-R-11, and to other tests of greater severity.

APPEARANCE

IRC carbon composition resistors have a glossy brown, smooth body. The molded jacket has close dimensional tolerances for trouble-free use in high speed lead forming and inserting machines. There is no wax coating to clog equipment.

IDENTIFICATION

Resistance values are clearly indicated by standard EIA/MIL Color Code bands. Solvent-resistant paints are baked on to provide distinct, permanent color bands.

STANDARD RESISTANCE VALUES

Type GBT resistors are supplied in all EIA/MIL standard values, subject to the minimum and maximum values for each type. (See table.) Other values are available on special order.

FIXED COMPOSITION RESISTORS.

IRC's unique design of 1/4-, 1/2- and 1-watt resistors means better performance and reliability. 50% more molding around the resistance element assures greater moisture protection. The working element is a layer of carbon thermally bonded to an inert glass filament for better resistance and temperature characteristics. Ribbed, shoulder leads are deeply imbedded in the molding to prevent twist or pull-out and act as heat sinks to conduct heat away for cooler operation and longer field life.

MOLDED WIREWOUND RESISTORS

IRC, Inc.

OUTPERFORMS FIXED COMPOSITION RESISTORS

IRC's new BWH molded wire wound resistor can be used in most applications normally filled by the lower values of composition resistors. The BWH exhibits the inherent stability, reliability, and long-term life characteristics of a wire wound unit. It provides low resistances unattainable in composition resistors.

Exceptionally stable, small and completely insulated the BWH meets or exceeds all MIL-R-11 performance requirements. Because it is the RC-32 size it will fit any 1 watt composition resistor processing equipment.

BWH resistors are packaged on the exclusive IRC GRIP STRIP, and are available in multiples of 10 and 50.

Power rating of this resistor is:

- ½ watt at 137°C. ambient
- 1 watt at 115°C. ambient
- 2 watts at 70°C. ambient.

TOLERANCES & RESISTANCE VALUES. Available in $\pm 5\%$ and $\pm 10\%$ tolerances in accordance with standard EIA resistance values. Minimum standard resistance: 0.24 ohm. Maximum standard resistance: 1800 ohms.

COLOR CODING. Resistance values are indicated by standard EIA Color Code bands, and are distinguished from composition resistors by a wide band for the first significant figure.

INSULATION. A plastic housing molded with IRC manufactured thermosetting materials at high pressure and temperature results in a high insulation resistance. This protects the element from effects of extreme climatic conditions. Type BWH resistors are brown in color.

NOISE. Negligible.

SHELF DRIFT. Negligible.

FUSE RESISTORS

This special resistor functions as a resistor under normal conditions, and as a fuse under overload conditions. It is used extensively as a surge-limiting resistor in voltage doubler circuits of TV receivers. Installation of an IRC Type FR fuse resistor in a TV set will prevent overloading of more valuable components and possibly fire due to a short circuit. The compact, modern design of IRC fuse resistor measures only $1\frac{3}{4}'' \times \frac{1}{2}'' \times \frac{3}{8}''$. This unit is completely insulated in a rectangular ceramic case, and equipped with plug-in terminals.

PRECISION DEPOSITED CARBON RESISTORS

IRC, Inc.

DEPOSITED CARBON PRECISIONS are available in 1/2, 1 and 2 watt sizes. The wide range of values, 1% tolerance, economy, low voltage coefficient, excellent frequency characteristics, predictable temperature high voltage rating, low noise level, and small size make IRC deposited carbon resistors ideal for application in advanced electronic equipment and critical TV circuits.

MOLDED DEPOSITED CARBON RESISTORS are designed for high reliability, stable performance, low voltage coefficient, low capacitive and inductive impedance in high frequency applications. In miniature 1/8, 1/4 and 1/2 watt sizes, plus 1 and 2 watt types.

Standard tolerance is 1%. (2% tolerance on high range units.) The housing gives complete protection, and offers better heat dissipating qualities. This results in improved load life and maximum moisture protection.

SECTION 4700

ADJUSTABLE & MILITARY POWER RESISTORS

IRC, Inc.

ADJUSTABLE RESISTANCE TYPES

IRC Adjustable Power Wirewound Resistors are standard resistors with a track exposed wire to allow for the adjustable feature. The track or slot is made by masking a section of the winding before testing, and then removing the mask after the coating has cured. No wire is damaged, which could damage the resistor wire, is used.

The IRC adjustable feature provides an ideal solution to add resistance values to handling a variety of line voltages, or more adjustable lugs may be used for voltage divided applications.

IRC, Inc.

HANDY-PAKS

The neatest, most compact resistor package available, and it's exclusive from IRC. Slimline plastic sleeve keeps leads straight and in place.

- Easier to identify—Type, resistance value and power rating on every Handy-Pak. Resistor color code is easily seen through the plastic.
- Handier to use—Opens at either end. Simply slide package out of plastic sleeve . . . withdraw the required number of resistors and slide the package into the sleeve.
- Quicker to find—Handy-Paks can be indexed by power rating and resistance. Resistors are always visible for inventory.

3 TYPES AVAILABLE—10% tolerance.

. . . 1/2 watt contains 6 GBT 1/2 carbon composition resistors; 1 watt package contains 4 GBT1 resistors and the 2 watt Handy-Pak contains 3 SR2 resistors.

RESIST-O-CADDY

Ideal for in-home servicing. Plastic pouch folds to 6 3/4" x 3 3/8" x 1 1/2" . . . fits easily in tube caddy or tool chest. Individual pockets keep Handy-Paks secure and orderly.

LECTROHM, while manufacturing the standard vitreous line, is also producing whole new groups of types, each designed to solve a special problem. Miniaturization and printed circuit restrictions in space and ventilation no longer are complicated by conventional power resistor size standards. New coating materials and winding methods developed by LECTROHM permit an infinite variety of configurations yet retain operating and life characteristics expected of the finest grade vitreous named types. LECTROHM engineers will fit the resistor size and shape to your design.

TYPE MOL METAL OXIDE FILM RESISTORS

Mallory MOL resistors have a thin layer of metal oxide evaporated onto a high quality ceramic rod. A precision ground spiral provides exactly the correct resistance. The MOL is essentially non-inductive with superb stability characteristics. May be used in place of either composition carbon, deposited carbon or wire-wound types. Full wattage at 70°C ambient.
To order: Use type number followed by resistance value (e.g., 2MOL1000). Tolerance: =10%.

Wattage rating in free air - All values listed

Values of resistance listed are in stock for immediate delivery. Special resistance values or terminal dimensions are given prompt attention and Tru-Ohm's famous delivery is assured.

Fixed wire wound, vitreous enameled resistors. Stock resistance values range from 10 thru 250,000 Ohm Standard tolerance of $\pm 5\%$. Closer resistance tolerances available on order.

The sturdy terminals are hot-tinned for soldering ease, and the holes in the terminal are of suitable size to accommodate screws.

VITREOUS ENAMELED ADJUSTABLE RESISTORS

These resistors are used in applications where it is necessary to make adjustment in resistance periodically, where intermediate values of resistance are required; or when provided with more than one adjustable lug as multiple tap resistors.

The wattage rating between the adjustable band and either end terminal is proportional to the distance between the terminal and the band and should be considered when figuring any maximum section wattage dissipation.

High quality, small size, wire-wound resistors ideal for voltage dropping, bias units, bleeders, etc. They're extra-sturdy, all-ceramic, vitreous enameled. These all-welded construction units have welded high-strength alloy terminals. For perfect electrical connection, the resistance wire is welded to the terminal. They give time-proved protection against shock, vibration, heat and humidity. Their long record of continuous trouble-free service—their wide use in all climates of the world—prove their complete reliability and economy. All units can be conveniently mounted by means of their 1½" tinned wire leads. Standard resistance tolerance is ±5%.

OHMITE R.F. PLATE CHOKES

This series of seven Ohmite single layer wound solenoid radio frequency plate chokes covers the entire frequency range of 3 to 520 megacycles. The four highest frequency chokes are wound on low power factor plastic cores while

the other three units are wound on steatite tubes. The single layer winding is designed to avoid adverse harmonic effects within the recommended operating range and also prevents breakdown from high r.f. potentials.

NEW OHM'S LAW CALCULATOR

Redesigned! This new, improved version of the famous Ohmite Ohm's Law Calculator — popular the world over with servicemen, engineers and students — now has scales for solving parallel resistance problems, AND a standard slide rule. More useful than ever! With one setting of the scale the calculator gives the answer to any Ohm's Law problem—reading directly in ohms, volts, amperes, and watts. Three of the new scales on the back provide a quick, one-setting means of solving parallel resistance problems. The slide rule scales will multiply, divide, find squares, and square roots.

SIZE

Ohmite's famous molded composition resistors, in the 1/8, 1/4, 1/2, and 2-watt sizes, conform respectively to Styles RC05, RC07, RC23, RC32 and RC42 of MIL-R-11E and meet all the requirements of this military specification.

Little Devils have molded insulation and feature great stability, low noise level, low voltage coefficient, high insulation breakdown voltage and rapid heat dissipation. They may be used at full rated wattage at 70°C (158°F) ambient temperature.

Available from stock in the standard EIA resistance values in the tolerances and resistance ranges shown in the price table below. Ratings for maximum continuous RMS voltage drop are high: 15 volts for 1/8 watt units, 250 volts for 1/4 watt, 350 volts for 1/2 watt, 500 volts for 1 watt and 750 volts for 2 watt units.

STANDARD EIA VALUES

Figures in large, bold type are ±10% EIA values. All values listed are ±5% values. Price table lists the various "Little Devil" sizes and indicates the tolerances and resistance ranges in which they are supplied.

SPEER FIXED COMPOSITION RESISTORS

Speer resistors are made on modern high speed equipment which molds component material into one integral, inseparable unit. Heavy pure tin-coated copper lead wires, thermosetting bonding resins, finely divided inorganic fillers, and specially produced and treated high conductivity materials such as carbon blacks are the materials used.

During the molding process, preformed insulating shells impregnated with bonding compounds are filled with carefully adjusted inorganic fillers. The binders and fillers of both shell and core are completely compatible and, under high pressure, allow the formation of an inseparable bond between shell and core. The thermal transfer characteristics of shell and core are essentially equal.

After high pressure molding, the "green" resistors are cured in a precisely adjusted, indirectly heated continuous tube furnace. The resin cure is complete and the final resistance of the unit is thereby fixed. A vacuum and pressure of special high temperature material develops maximum protection against moisture penetration.

The special impregnant used is completely stable under all operating conditions. This material seals and produces an effective barrier to moisture penetration.

Speer resistors are color coded with special paints developed to provide a high degree of solvent resistance.

All Speer resistors have lead wires of high conductivity copper with a solderable coating of heavy pure tin. The wires are completely precoated before assembly, so that the solderable surface is unbroken over the entire area. The tin coat is controlled to a thickness of .0003"-.0008", several times as heavy as that on ordinary tinned wire. The use of pure tin affords superior storage life and offers the ultimate in low temperature solderability.

The impregnated resistors are measured on high speed automatic resistance sorters and classified into appropriate resistance nominals and tolerances. The color bands and protective outer film are applied after sorting.

STACKPOLE

FIXED COMPOSITION RESISTORS

Stackpole Resistors offer superior performance in terms of load life, moisture resistance, shelf life, and other important characteristics. Available in 1/4, 1/2, 1, and 2 watt insulated types in resistance values with 5%, 10% and 20% tolerances as shown below.

EASIEST SOLDERING

is assured thanks to an exclusive extra solder coating applied after the usual tin dipping. Leads of Stackpole Resistors solder readily by any method—dip or iron—stay tarnish free even after months in storage. And, their baked-on color codes resist solvent scrubbing operations... maintain uniform, attractive appearance.
